Journal of Physics C: Solid State Physics

Honorary Editor

Dr A B Lidiard

Editorial Board

Dr I G Austin
Professor F Bassani
Mr J R A Beale
Professor P N Butcher
Professor R A Cowley
Dr R J Elliott
Professor C H L Goodman
Professor S Lundqvist
Professor N H March
Professor S D Smith

International Advisory Board

Professor L Genzel
Dr Yu Kagan
Professor T Matsubara
Professor Sir Nevill Mott
Professor W Paul
Professor F Seitz
Professor R Simmons

Managing Editor

Dr D G Fisher

Assistant Editor

Dr R J Palmer

Subscription Information

Journal of Physics C: Solid State Physics is published twenty four times a year by The Institute of Physics, 47 Belgrave Square, London, SW1X 8QX, England, in association with the American Institute of Physics, and is printed in Great Britain by Page Bros (Norwich) Limited, Norwich. Second class postage paid at New York, NY 10001, USA.

The public subscription rates for all countries except the United States, Canada and Mexico is £60 per annum (air mail rates on application), and orders should be sent to:

Physics Trust Publications
Blackhorse Road
Letchworth
Herts
England

The rate for North America by airfreight is US $162.00 per annum. Orders from North American countries (except for back issues of previous volumes and single copies) should be sent to:

American Institute of Physics
335 East 45th Street
New York
NY 10017
USA

The single issue price is £3.50 (US $9.45). All orders for single issues of the current volume should be sent to:

Physics Trust Publications
Blackhorse Road
Letchworth
Herts
England

All orders for back issues should be sent to:

Wm Dawson and Sons Ltd
Back Issues Department
Cannon House
Park Farm Road
Folkestone
Kent
England

Contents

NO 1 17 JANUARY 1972

LETTERS TO THE EDITOR

L1 *M F Thomaz, Marila F Thomaz and C L Braga* · Decay times of the 415 and 503 nm fluorescence bands of type I diamonds under ultraviolet excitation

L5 *I M Boswarva* · Further calculations of the energies of formation of Schottky defects in NaCl structure ionic crystals.

PAPERS

1 *A McKerrell and R G Bowers* · Critical phenomena with many body interactions: an exactly soluble model system

5 *F A Buot* · On the relaxation rate spectrum of phonons

15 *M R Hayns* · Tests of the CNDO method for the band structure of crystalline solids: I. Calculations on lithium fluoride

21 *C Caroli, R Combescot, P Nozieres and D Saint-James* · A direct calculatiion of the tunnelling current: IV. Electron–phonon interaction effects

43 *R Jones and W Schaich* · Theory of impurity band hopping conduction

55 *C G Gray and H I Ralph* · Solution of Boltzmann's equation for semiconductors using a spherical harmonic expansion

63 *C E T Gonçalves da Silva and L M Falicov* · Theory of magnetic properties of rare earth compounds

77 *D J Thouless* · A relation between the density of states and range of localization for one dimensional random systems

82 *V Ausin and J L Alvarez Rivas* · Thermoluminescence and annealing of F centres in KCl γ irradiated at room temperature

NO 2 31 JANUARY 1972

LETTERS TO THE EDITOR

L9 *M A Moore and J E T Trainin* · Spin dependence of critical indices in the two dimensional Ising model

L13 *M A Ball* · The electronic structure of disordered systems: II. The nature of the localized states

PAPERS

97 *D G Pettifor* · First principle basis functions and matrix elements in the H-NFE-TB representation

121 *G E Stedman* · Phonon-induced shift of spectral lines: I. General theory

134 *A R Allnatt and S J Sime* · The polarization impedance of sodium chloride crystals

147 *P H Melville* · Currents in rough surfaces of type II superconductors

159 *M Costato and L Reggiani* · Nonparabolicity and overlap effects on transport problems in the Froehlich and Paranjape approach

187 *B K Ridley, J J Crisp and F Shishiyanu* · Slow domains and negative resistance via the enhanced capture of transferred electrons in n type GaAs

199 *R S Sussmann and B K Ridley* · The growth of acoustoelectric current in GaAs

212 *K Fletcher and P N Butcher* · An exact solution of the linearized Boltzmann equation with applications to the Hall mobility and Hall factor of n-GaAs

225 *V Heine and C H Hodges* · Theory of the surface dipole on nontransition metals

231 *J Oitmaa and I G Enting* · Critical behaviour of the anisotropic Ising model

245 *J J Davies, S R P Smith, J Owen and B F Hann* · ENDOR measurements of spin transfer in $(VF_6)^{4-}$

NO 3 14 FEBRUARY 1972

LETTERS TO THE EDITOR

L17 *F K Schulte and H Bross* · Note on the band theory of the quantum size effect
L19 *L Eaves, R A Stradling, S Askenazy, G Carèrre, J Leotin, J C Portal, and J P Ulmet* · An investigation of the conduction band edge in CdSe by the magnetophonon effect

PAPERS

257 *J H Beaumont, A L Harmer and W Hayes* · The F_3 centre in alkaline earth fluorides: I
266 *J H Beaumont, A L Harmer and W Hayes* · The F_3 centre in alkaline earth fluorides: II
275 *J H Beaumont, A L Harmer and W Hayes* · The F_3^- centre in CaF_2 and SrF_2
279 *N Kristianpoller and Z Davidson* · On the UV excitation of thermally stimulated conductivity in KBr and KI crystals
287 *O Litzman, M Bartušek and V Zavadil* · Lattice dynamics of a crystal containing a point defect with a long range interaction
293 *L S Kothari and U Singhal* · Lattice dynamics of sodium—comparison of de Launay and CGW models
300 *F Cyrot-Lackmann* · Spectral limits in disordered systems
306 *H U Rahman* · Optical intensities of trivalent erbium in various host lattices
316 *H A Brown* · On classical-spin biquadratic exchange
319 *C F Osborne* · Spin wave theory of a dilute anisotropic Heisenberg ferromagnet
330 *C R Jeggo* · Nonlinear optics and optical activity
338 *E A Harris* · EPR of Mn^{2+} pairs in MgO and CaO

NO 4 29 FEBRUARY 1972

LETTERS TO THE EDITOR

L23 *M A Ball* · The validity of the KKR equations for overlapping potentials

PAPERS

353 *M I Barker and T Gaskell* · Velocity autocorrelation function and diffusion coefficient in a liquid: II
366 *H Gobrecht and F Mahdjuri* · Switching and memory effects in liquid selenium
374 *N Giovannini and J Muggli* · Elastic interaction of point defects in a cubic continuum; analytic expressions for the [110] direction
379 *A R Bean, S R Morrison, R C Newman and R S Smith* · Electron irradiation damage in silicon containing high concentrations of boron
401 *Y V G S Murti and C S N Murthy* · Vacancy pair formation energies with the CsCl structure
408 *R Dupree and M A Smithard* · The electronic properties of small metal particles: The electric polarizability
415 *N E Hill* · The theories of complex permittivity
425 *Z Sümengen and G A Saunders* · The thermomagnetic tensor and the Umkehr effect in bismuth
435 *J Oitmaa* · Critical behaviour of a generalized Ising model
450 *M J Metcalfe and H M Rosenberg* · The magnetothermal resistivity of antiferromagnetic crystals at low temperatures: I. $DyPO_4$, pa nearly ideal Ising system
459 *M J Metcalfe and H M Rosenberg* · The magnetothermal resistivity of antiferromagnetic crystals at low temperatures: II. $GdVO_4$, a nearly ideal Heisenberg system
474 *M J Metcalfe and H M Rosenberg* · The magnetothermal resistivity of antiferromagnetic crystals at low temperatures: III. $ErVO_4$, a new antiferromagnet
481 *J F B Hawkes and R W Teale* · Spontaneous and photoinduced linear dichroism in silicon doped yttrium iron garnet
493 *T P Martin* · Calculated impurity induced Raman scattering in CsCl
502 *M R Brown, A F J Cox, W A Shand and J M Williams* · Sensitization of rare earth photoluminescence in II–VI compounds: II. Site sensitive excitation mechanisms in zinc selenide
511 *C J Radford, W E Hagston and F J Bryant* · Electron temperatures deduced from comparative studies of photo- and cathodoexcitation of free-to-bound emission
518 *S Clough, J Hill and F Poldy* · Methyl group tunnelling rotation frequency in γ-irradiated methyl malonic acid crystals

NO 5 14 MARCH 1972

LETTERS TO THE EDITOR

L27 *D Richardson* · The effect of displacement on energy gap bowing in zincblende semiconductor alloys
L31 *M B Salamon* · Electrical resistivity at antiferromagnetic transitions
L35 *A K Cheetham and B E F Fender* · Neutron diffraction study of nonstoichiometric cerium hydride

PAPERS

529 *R de Wit* · Partial disclinations
535 *R W Munn* · Rôle of the elastic constants in negative thermal expansion of axial solids
543 *H H Lal and M P Verma* · Lattice dynamics of rubidium halides
549 *G J Rees* · Diamagnetic excitons in degenerate bands
562 *R C Birtcher, P W Deutsch, J F Wendelken and A B Kunz* · Valence band structure in silver fluoride
567 *P N Butcher and H M Janus* · The linear theory of acoustoelectric oscillators with arbitrary static field distributions
582 *J Slechta* · A nonlinear theory of acoustoelectric phenomena. Saturation study—Application to thin AE oscillator
595 *A D Bruce and R A Cowley* · The two phonon Raman spectra of alkali halide crystals
606 *H Nara and M Schlesinger* · Analysis of the spectra of Dy^{3+} doped calcium fluoride
615 *J Poitrenaud et F I B Williams* · Résonance et relaxation électronique à 300 MHz du praseodyme trivalent dans le double nitrate de lanthane et de magnesium
631 *J L Carolan, S Clough, N D McMillan and B Mulady* · Proton relaxation and hyperfine structure due to tunnelling methyl groups

NO 6 28 MARCH 1972

LETTERS TO THE EDITOR

L41 *S Andersson and J B Pendry* · Surface structures from low energy electron diffraction
L46 *S R Morrison, R C Newman and F Thompson* · A radiation damage centre in gallium phosphide containing boron
L50 *R Folland and J H Strange* · Pressure dependence of self diffusion in the plastic crystals hexamethylethane, norbornylene and cyclohexane
L56 *R Harris* · The Dirac matrix for spherically symmetric potentials
L58 *A Briguet et A Erbeia* · Determination indirecte du temps de relaxation spin–reseau du silicium 29 dans le trichlorosilane

PAPERS

641 *H D Rees* · Numerical solution of electron motion in solids
657 *B Vinter* · Computer simulation of the acoustoelectric oscillator
664 *J J Field* · Ferromagnetism in a narrow-band solid
676 *J E Lowther* · Anisotropic spin–orbit coupling of rare earth ions in crystal fields
680 *W E Hagston* · Theoretical formulation of the effects of charge transfer states on optical transitions in s^2 ions
691 *W E Hagston* · Theory of the fine structure of the UV absorption of heavy metal ions in the alkali halides
702 *S Rakshit, S N Biswas and A N Chakravarti* · Spontaneous emission spectrum in n type GaAs of different doping concentrations excited by a 40 kV electron beam at 300 K
709 *A E Hughes, G P Pells and E Sonder* · Symmetry assignments of one-phonon sidebands in the emission spectrum of the F^+ centre in calcium oxide
716 *R C Kemp* · Paramagnetic resonance of CdS:Fe:Ag

NO 7 13 APRIL 1972

LETTERS TO THE EDITOR

L65 *T Kaneyoshi and R Honmura* · Spin wave theory of amorphous ferromagnets
L70 *T B Grimley and B J Thorpe* · Exact and approximate ground state energy of Hubbard's hamiltonian for surface molecules

PAPERS

721 *P Lucas and A J Hillel* · Coupling from second to first sound in uniformly rotating liquid helium
732 *J Killingbeck* · Generators and integrity bases for some point groups
738 *R A Bromley and R B Murray* · The band structures of some transition metal dichalcogenides: I. A semiempirical tight binding method
746 *R B Murray, R A Bromley and A D Yoffe* · The band structures of some transition metal dichalcogenides: II. Group IVA: octahedral coordination
759 *R A Bromley, R B Murray and A D Yoffe* · The band structures of some transition metal dichalcogenides: III. Group VI A: trigonal prism materials
779 *A Gainotti and C Ghezzi* · Surface effects on positron annihilation in elementary semiconductors
787 *C Billington* · Phosphorescence mechanisms in ZnS: Cu
791 Corrigenda

NO 8 27 APRIL 1972

LETTERS TO THE EDITOR

L73 *R B Dennis, R A Wood, C R Pidgeon, S D Smith and J W Smith* · Fundamental loss mechanisms of the spin-flip Raman laser
L80 *J D Gibbon and R K Bullough* · Theory of the Schwarz–Hora effect
L85 *T Egami* · Effect of zero-point energy on magnetocrystalline anisotropy of the rare earth metals
L89 *P S Allen, W Harding and P Mansfield* · Quasiquadrupolar echoes from solids containing only $I = \frac{1}{2}$ spins

PAPERS

793 *V B Sapre and C Mande* · Chemical shifts in the K absorption discontinuity of arsenic
798 *R Subramanian and K V Bhagwat* · The relativistic Tamm model
807 *J T Edwards and D J Thouless* · Numerical studies of localization in disordered systems
821 *D Richardson and R Hill* · The origins of energy gap bowings in substitutional semiconductor alloys
828 *H-K Liu, R I Joseph and P E Wagner* · Theory of the spin–phonon avalanche in paramagnetic crystals: I. Spatial phonon transport
843 *H-K Liu, R I Joseph and P E Wagner* · Theory of the spin–phonon avalanche in paramagnetic crystals: II. Spectral diffusion of magnetic energy
852 *J R Fletcher* · A variational groundstate for the dynamic Jahn–Teller effect
863 *D Marsh* · Distortions of Tm^{2+} trigonal centres in alkaline earth fluorides
871 *R A George, D H Martin and E G Wilson* · The ultraviolet spectra of polyethylene and long-chain paraffins
879 *A T Davidson and A F Vickers* · The optical properties of mica in the vacuum ultraviolet
888 Corrigendum

NO 9 10 MAY 1972

LETTERS TO THE EDITOR

L95 *Y Sasaki, C Hamaguchi and J Nakai* · Electroreflectance of CaSe single crystals in higher interband transition region
L99 *A A Gomes, A P Guimaraes and L Iannarella* · Remarks on Gd g shifts
L102 *M A B Whitaker* · Chemical shifts in Auger spectra

PAPERS

889 *G M Bell* · Statistical mechanics of water: lattice model with directed bonding
906 *C E T Goncalves da Silva and L M Falicov* · Metal–insulator transitions: a coherent potential approximation
914 *M Saitoh* · Stark ladders in solids
928 *G P Srivastava and R M Mehra* · The free carrier magneto-microwave Kerr effect in p type germanium at 296 K and 77 K

933 *D C Rapaport* · Perturbation theory, scaling and the spherical model
956 *C Domb and G S Joyce* · Cluster expansion for a polymer chain
977 *A P Cracknell and A K Sedaghat* · The antisymmetrized squares and the symmetrized cubes of the irreducible corepresentations of the magnetic point groups
985 *J Killingbeck* · Singular matrix representations of point groups
990 *T B Smith* · Molecular motion in NMR: II

NO 10 25 MAY 1972

LETTERS TO THE EDITOR

L107 *T Kaneyoshi* · On the possibility of a new type of amorphous ferromagnet
L110 *A M White, P J Dean, L L Taylor and R C Clarke* · The observation of strain effects in the photoluminescence spectrum of excitons bound to neutral acceptors in indium phosphide
L113 *R Coates and E W J Mitchell* · Tunnel assisted hopping in neutron irradiated gallium arsenide

PAPERS

997 *D N Chambers and R C Newman* · Complexes of low symmetry involving hydride ions paired with trivalent rare earth ions in calcium fluoride
1008 *G C Cran and M J L Sangster* · Conditions on the elastic constants for rutile structure crystals
1017 *R E Shawyer and P Dean* · Atomic vibrations in orientationally disordered systems: I. A two dimensional model
1028 *R E Shawyer and P Dean* · Atomic vibrations in orientationally disordered systems: II. Hexagonal ice
1038 *H H Lal and M P Verma* · Lattice dynamics of CsCl, CsBr and CsI
1046 *B Yates, F R Cooper and A F Pojur* · Thermal expansion at elevated temperatures: II. Aluminium oxide: experimental data between 100 and 800 K and their analysis
1059 *T Fujita and J Hori* · Degree of localization in three dimensional disordered systems
1067 *K P Singh, R M Singru and C N R Rao* · Positron lifetimes and phase transitions in solids
1072 *P Leroux-Hugon and A Ghazali* · Contribution to the theory of the anomalous Hall effect: Influence of the band structure on the skew scattering
1082 *S M Bose and E-Ni Foo* · Density of spin waves states in disordered Heisenberg ferromagnetic chains
1089 *D J Newman* · Superexchange models: I. General theory
1101 *V Grasso, G Mondio and G Saitta* · Optical constants of $MoTe_2$ from reflectivity measurements

NO 11 12 JUNE 1972

LETTERS TO THE EDITOR

L119 *P W Anderson, S T Chui and W F Brinkman* · Vacuum polarization and the force between two excitons
L124 *J M Kosterlitz and D J Thouless* · Long range order and metastability in two dimensional solids and superfluids
L127 *J Bernasconi, D Kuse, M J Rice and H R Zeller* · One dimensional conduction: a two dimensional problem
L131 *F J Wegner* · Duality relation between the Ashkin–Teller and the eight-vertex model
L133 *C R Jeggo* · Second harmonic generation in molybdates
L136 *C A Bates, S C Jones, V W Rampton and P Steggles* · Ferrous ions in ruby crystals

PAPERS

1109 *J Keller and P V Smith* · The *T* matrix and the *K* matrix in cluster scattering
1123 *J H Denning and S D Ross* · The vibrational spectra and structures of rare earth oxides in the A modification
1134 *A Kessler and J E Caffyn* · An investigation of the thermal defect order, defect mobility, and defect complex formation in cadmium fluoride
1153 *L J Challis and C N Hooker* · The effect of electric and magnetic fields on the thermal conductivity of glass at low temperatures
1158 *A N Basu and S Sengupta* · Deformable shell model and the properties of LiF crystals

1165 *I Katz and S A Rice* · On the calculation of the density of localized states in a dense fluid
1183 *R A Abram and S F Edwards* · The nature of the electronic states of a disordered system: I. Localized states
1196 *R A Abram and S F Edwards* · The nature of the electronic states of a disordered system: II. Extended states
1207 *P Sah and A K Rajagopal* · Canonical density matrix for muffin tin potentials
1216 *M Vuorio* · The effect of low energy vibrational modes on the Kapitza resistance
1222 *A J McEcoy and R H Williams* · The low energy photoemission spectra of gallium sulphide
1226 *O Nagai, N L Bonavito and T Tanaka* · On the magnon interaction in haematite: I. Magnon energy of optical mode
1237 *D Bloor and J R Dean* · Spectroscopy of rare earth oxide systems: I. Far infrared spectra of the rare earth sesquioxides, cerium dioxide, and nonstoichiometric praseodymium and terbium oxides
1253 *M Kozielski, I Pollini and G Spinolo* · Electronic absorption spectra of Ni^{2+} in $NiCl_2$ and $NiBr_2$
1265 *A P G Hare, G Davies and A T Collins* · The temperature dependence of vibronic spectra in irradiated silicon

NO 12 26 JUNE 1972

LETTERS TO THE EDITOR

L139 *C J Palin, W F Vinen and J M Vaughan* · The scattering of light by liquid helium close to the λ line
L143 *H Hoinkes, H Nahr and H Wilsch* · Gas atom–crystal surface potentials for (001) LiF
L146 *M Elices and F Yndurain* · Electronic surface states in Ge
L151 *J Lam* · Electron energy renormalization and resistivity in the s–d model
L154 *R F Frindt, R B Murray, G D Pitt and A D Yoffe* · Anisotropy in the resistivity of NbS_2 with pressure
L157 *S R P Smith* · Soft modes in singlet ground state ferromagnets

PAPERS

1277 *W S Howells and J E Enderby* · Effective pair potentials for liquid Na and liquid K
1284 *R I Jolly and J M Titman* · Longitudinal nuclear spin relaxation in liquid alloys of indium
1293 *J A Pryde and C G Titcomb* · Phase equilibria and kinetics of evolution of dilute solutions of hydrogen in niobium
1301 *J A Pryde and C G Titcomb* · Thermodynamic data of the hydrogen–niobium system
1309 *A W Hewat* · Vibrational amplitudes and Debye–Waller factors from elastic constants and Raman frequencies
1317 *C J Hearn* · Phonon softening and the metal–insulator transition in VO_2
1335 *J Sak* · Statistical electron–hole correlation in disordered systems: interband transitions
1345 *E R Cowley* · The one-phonon Green function and the dielectric properties of sodium chloride
1360 *K W H Stevens* · Exchange interactions in rare earth chalcogenides
1375 *H L Scott Jr* · Critical concentration against interaction range: II
1383 *M R Bhagavan and C Blomberg* · Selfconsistent singularities of the static correlation function at the critical point
1399 *C Domb* · Term structure of series expansions for the Ising and classical vector models and dilute magnetism
1417 *C Domb* · Weighting of graphs for the Ising and classical vector models
1429 *D S Gaunt and M F Sykes* · Re-analysis of the critical isotherm of the Ising ferromagnet
1445 *R Bhandari and L M Falicov* · Theory of the magnon sidebands in optical transitions of antiferromagnetic insulators
1461 *M G Cottam* · Theory of two-magnon Raman scattering in antiferromagnets at finite temperatures
1475 *J H Beaumont, A L Harmer and W Hayes* · An investigation of $\langle 100 \rangle$ and $\langle 110 \rangle$ oriented F_2 centres in CaF_2 and SrF_2
1489 *J H Beaumont, A L Harmer, W Hayes and A R L Spray* · Zero-phonon lines in CaF_2 and SrF_2
1501 *R T Harley, W Hayes and S R P Smith* · Raman scattering investigations of Jahn–Teller induced phase transitions in $TmAsO_4$ and $TmVO_4$
1511 *S C Jain, A V R Warrier and H K Sehgal* · Vibrational and electronic properties of $Co(CN)_6^{3-}$ doped in alkali halides
1519 *A J Lindop, I J Barton and D W Goodwin* · The stimulated emission cross section for the trivalent neodymium ion in single crystal calcium aluminate

1526 *C J Radford, W E Hagston and F J Bryant* · Analysis of the effects of electron damage on the bound-to-bound emission intensity of cadmium sulphide
1537 *I M Blair, D Pooley and D Smith* · The lifetimes of fast recombination luminescence transitions in alkali halides

NO 13 10 JULY 1972

LETTERS TO THE EDITOR
L163 *S Simons* · Thermal conductivity anisotropy in solid helium
L166 *F W Sheard and G A Toombs* · Transfer hamiltonian approach to Kapitza resistance
L169 *Shih-Yu Feng* · A note on Andrew's second moment correction formula
L171 *A Kyselka* · Note on the SCF theories of the polymer excluded volume problem

PAPERS
1553 *M R Buckton and D Pooley* · The radiation damage process in MgF_2
1563 *P S Cheung and C J Hearn* · The diffusion of electrons in semiconductors in high electric fields
1573 *J M Machado da Silva, J M McDermott and R W Hill* · The low temperature specific heats of some Laves phases containing neodymium
1584 *J M Machado da Silva and R W Hill* · The electronic specific heats of $CeNi_2$ and $CeCo_2$
1589 *A D Redmond and B Yates* · The low-temperature thermal expansion of thallous chloride and thallous bromide
1604 *P Bryce and J C Kelly* · Charged particle sputtering: distortion of trajectories by the incident beam field
1615 *R O Jones* · Model calculation of surface states in silicon
1629 *U von Barth and L Hedin* · A local exchange-correlation potential for the spin polarized case: I
1643 *M R Halse and K M Salleh* · The temperature dependence of the critical current of a double Josephson junction
1649 *A Aldea* · On the Hall effect in hopping impurity conduction
1657 *J R Barker* · The oscillatory structure of the magnetophonon effect: I. Transverse configuration
1675 *D W Wood and N W Dalton* · High temperature series expansions for the anisotropic Heisenberg model
1687 *I G Austin* · Optical properties of the small polaron in high electric fields
1705 *J F B Hawkes and M J M Leask* · Spectroscopic study of $Er^{3+} - Gd^{3+}$ interaction in $Er:GdAlO_3$
1716 *B V Shulgin, K N R Taylor, A Hoaksey and R P Hunt* · Optical characteristics of Tb^{3+} ions in soda glass
1727 *A M White, P J Dean, L L Taylor, R C Clarke, D J Ashen and J B Mullin* · The photoluminescence spectrum of bound excitons in indium phosphide and gallium arsenide
1739 *S Clough, J Hill and F Poldy* · Tunnelling sidebands of methyl group hyperfine structure

NO 14 24 JULY 1972

LETTERS TO THE EDITOR
L175 *J S Rousseau, J C Stoddart and N H March* · The electrical resistivity of liquid metals
L178 *S E Barnes* · Generalization of the drone fermion method
L181 *D W Wood* · A self dual relation for a three dimensional assembly

PAPERS
1745 *D J Edwards and J Jarzynski* · Ion–ion potentials in liquid metals
1757 *J Harris* · The effect of short range correlations on surface plasmon dispersion
1773 *W B Waeber* · A contribution to the theory of lattice vibrations
1799 *C M Care* · One dimensional hydrogen atom with a repulsive core
1806 *H M Gupta and U N Upadhyaya* · Rôle of paramagnetic impurities in the barrier region for superconducting tunnelling
1817 *P N Butcher* · On the rate equation formulation of the hopping conductivity problem
1830 *D C Rapaport* · The Ising ferromagnet with impurities: a series expansion approach: I
1859 *A Stevens* · Antiferromagnetic dispersion, absorption and light scattering in NiO and other face centred cubic crystals
1876 *J Kötzler* · Two-step crossrelaxation in ruby: evidence for generalized thermodynamics

1883 *A Grimm* · Infrared absorption by point defects in gallium arsenide
1893 *G D Holah* · Optical phonons and polaritons in $ZnSiP_2$
1903 *D C Champeney and D F Sedgwick* · Investigation of molecular motion in some organic glasses and supercooled liquids by Mössbauer scattering
1914 *F J Bryant and P S Manning* · Selenium displacement and the infrared cathodoluminescence of zinc selenide

NO 15 7 AUGUST 1972

LETTERS TO THE EDITOR

L185 *K Hölzl and C Schmid* · Localized and resonance modes in polyethylene below 700 cm^{-1} due to kinks and folds

Subject index

Abrupt potential model
in theory of surface states 3469–72
Absorption
band structures of TiS_2, $TiSe_2$ and $TiTe_2$ 3038–46
coefficients, measured for layer compound GaSe L95–8
contribution to Hall effect in hopping impurity conduction 1649–56
dichroism in band of F^+ centre in CaO 2225–45
effect of boron concentration in irradiated silicon 379–400
effect of melting on infrared spectra of KBr, NaCl and LiF 2276–82
effect of polarization on two-photon coefficient 2651–64
electronic spectra of $NiCl_2$ and $NiBr_2$ 1253–64
energy loss of fast electrons 3153–60
F_2 centre in CaF_2 and SrF_2 1475–88
F_3 centre in alkaline earth fluorides 257–65, 266–74, 275–8
infrared, in Ar with Kr and Ne impurities 3264–72
far infrared, in Er_2O_3 2921–40
infrared, in GaAs 1883–92
infrared, in n-GaP L223–5
infrared, in $(MnZn)F_2$ 2011–26
infrared spectra of rare earth oxides 1237–52
in NiO and other FCC crystals 1859–75
Jahn–Teller transition in $TmVO_4$ 2027–36
K discontinuity of As 793–7
linear dichroism in silicon-doped yttrium iron garnet 481–92
line in photoconduction spectra of irradiated diamonds 2762–8
localized vibration of Si and B in GaAs crystal 1999–2010
of heavy metal ions in alkali halides 691–701
of Fe^{2+} ion in mica 1991–8
optical, of indium 2503–10
optical, of mica 879–87
of small polaron by a static electric field bias 1687–704
soft x ray spectrum of LiF 3259–63
sound, effect of magnetic field on ultrasound in $SrTiO_3$ 2419–26
sound, oscillation in Sn-doped Bi with a magnetic field 2405–18
spectra of thin film $C_{28}H_{58}$ and $C_{42}H_{86}$ 871–8
spectra, ultraviolet, in alkali halides 691–701
spectrum of $Co(CN)_6^{3-}$-doped NaCl and KCl crystals 1511–8
Acoustic anomaly
in crystal showing Jahn–Teller phase transitions 3126–46
Acoustic attenuation
and frequency shift in ferromagnetic insulator 2903–8
concentrated paramagnetic crystals: spin $\frac{1}{2}$ system 2064–76
flux in GaAs 199–211, 3477–90
Acoustic paramagnetic resonance
effect of electric field 3414–30
spectrum of Cr^{2+} and Mn^{3+} in Al_2O_3 3397–413
Acoustic phonon scattering
in non-degenerate semiconductor 55–62
Acoustic resonance
measurement on ruby crystal L136–8
Acoustoelectric effects
current in GaAs 199–211
gain in n-GaAs 3477–90
oscillator, computer simulation 657–63
oscillator, linear theory for arbitrary static field distribution 567–81
oscillator, saturation region 582–94
nonlinear theory 582–94
Actinide pnictides
study of US, USe and UTe by neutron diffraction 3012–20
Activation energy
for Xe diffusion in CsI L256–60
Absorption
anisotropy in layer chalcogenides L191–3
monolayer, chemical shift of Auger spectra L102–5
Alkali halides
approximation of Debye temperature 2562–6
dielectric response of thin films 2511–22
energy of formation of Schottky defect L5–8
lattice dynamics 1038–45

lifetime of luminescence transition 1537–52
radiation damage process in MgF_2 1553–62
UV absorption of heavy metal ions 691–701
vibrational and electronic properties 1511–8
measurements of Hall effect and magnetoresistance 2867–80
relation between rigid neutral atom density and ion–electron–ion interaction L213–5
surface dipole 225–30
Alkaline earth fluorides
ionic distortions by Tm^{2+} trigonal centres 863–70
study of F_2 centre 1475–88
study of F_3 centre 257–65, 266–74, 275–8
zero-phonon line 1489–500
Alloys, dilute
spatial phonon transport in $Ce_2Mg_3(NO_3)_{12}.24\,H_2O$ 828–42
two-magnon Raman scattering and infrared absorption in $(MnZn)F_2$ 2011–26
Aluminium
oxygen absorption on L102–5
Aluminium oxide
resonance spectra of Cr^{2+} and Mn^{3+} 3397–3413
shape of APR lines in constant electric fields 3414–30
thermal expansion at elevated temperatures 1046–58
Ammonium chloride
study of positron lifetime 1067–71
Amorphous ferromagnets
possibility of new type L107–9
spin wave theory L65–9, 3504–20
Amplifier
harmonic response formula L169–70
Anderson model
numerical study of disordered systems 807–20
Anderson-type superexchange
in rare earth compounds, insulators 63–76
Andrew's second moment correction formula
harmonic response by an amplifier L169–70
Anharmonic correction
to $C_v/3Nk$ in inert gas solids 2138–48
Anharmonicity
examination of effective potentials in the cluster approximation 2941–8
Anharmonic oscillator model
used to determine optical activity of $NaClO_3$ and $NaBrO_3$ 330–7
Anion vacancy
interaction with cation vacancy in CsCl lattice 401–7
Anisotropic spin–orbit coupling
of rare earth ions in crystal fields 676–9
Anisotropic superexchange
model of interaction 1089–100
Anisotropy
effect of zero point energy in Dy L85–8
Annealing
effect of N impurity on annealing in diamond 2534–42
of F centres in irradiated KCl 82–96
dispersion in NiO and other FCC crystals 1859–75
electrical resistivity L31–3
excitation spectrum 2896–902
lattice model of superantiferromagnetism 2460–7
magnon sidebands in optical transitions 1445–60
Raman scattering by zone boundary phonons 2482–96
spin-flop transition in $CoCl_2.6H_2O$ L197–200
spin waves in $(Mn, Co)F_2$ and $K(Mn,Co)F_3$ 2611–28
two-magnon Raman scattering at finite temperature 1461–74
Antiferromagnetism
$DyPO_4$ 450–8
$ErVO_4$ 474–80
Fe and Co P_2 glasses L261–5
$GdVO_4$ 459–73
thermal expansion 2731–45
Antimony disulphide
AC conduction 2881–6
Antisymmetrized squares
of corepresentations of magnetic point groups 977–84
Arbitrary spin
application of drone-Fermion method L178–80
Argon
diffusion coefficient and velocity autocorrelation 353–65
far infrared absorption in presence of Kr and Ne 3264–72
Arsenic
chemical shift in K absorption discontinuity 793–7
thermal expansion 2731–45
Ashkin–Teller model
duality relation with eight-vertex model L131–2
high-temperature series for susceptibility L250–1
Associated memory function
theory used to determine diffusion

coefficient and velocity autocorrelation function 353–65
Asymmetrical correlations
influence on emission of solid compounds 2192–9
Atomic beam scattering
determination of surface potentials for LiF L143–5
Atomic displacement
effect on alloy lattice sites L27–30
Atomic structure
effect of Coulomb correlations in calculations L188–90
Atomic vibrations
orientally disordered systems: hexagonal ice 1028–37
in two-dimensional model 1017–27
Atomistic model
computer simulation of brittle-fracture L271–4
Auger spectroscopy
applied to surfaces of layer chalcogenides L191–3
chemical shift L102–5
Autocorrelation function
compared to spectral density theory of permittivity 415–24
Avalanche, spin–phonon in paramagnetic crystals
spatial phonon transport 828–42
spectral diffusion of magnetic energy 843–51
Axial solid
elastic constants in negative thermal expansion 535–542

Band magnetization
in Gd 99–101
conduction in metal–insulator transition 906–13
Band edge
determination for Si and Ge 300–5
Band edge states
in a 1D crystal 2583–90
Band structure
calculation by CNDO method 15–20
effect of Coulomb correlation in calculations L188–90
influence on skew scattering causing anomalous Hall effect 1072–81
theory of quantum size effect L17–8, 2591–8
transition metal dichalcogenides 738–45, 746–58, 759–78, 3038–46
GaN 3462–8
Barium compounds
magnetic properties 2887–95
Bernstein mode
plasmon resonance in magnetic field 3245–52
Biquadratic exchange
effect on Curie temperature θ 316–8
Mn^{2+} pairs in MgO and CaO 338–52
Bismuth
electron and hole transport 3061–72
magnetoacoustic oscillations in Sn-doped crystals 2405–18, 3073–84
thermal expansion 2731–45
thermomagnetic tensor and Umkehr effect 425–34
Body-centred cubic lattice
statistical mechanics of water 889–905
Boltzmann's equation
solution for GaAs 212–24
solution for semiconductors 55–62
Boron
effect of boron concentration on irradiated silicon 379–400
effect of irradiation on concentration in gallium phosphate L46–9
Boron nitride
optical properties 3097–100
Breathing shell model
calculation of two phonon Raman spectrum of KBr 595–605
dielectric properties of NaCl 1345–59
perfect crystal, to determine impurity induced Raman scattering in CsCl 493–501
Brillouin scattering
in crystals showing Jahn–Teller phase transitions 3126–46
Brittle-fracture
atomic computer simulation L271–4
'Bubble' type dielectric function
calculation of spin dependent one-electron potential 1629–42

Cadmium compounds
CdF, investigation of crystal defect 1134–52
CdS, damage intensity changes 1526–36
CdS, emission spectrum of Yb^{3+} 2669–76
CdS, paramagnetic resonance spectra in single crystals 716–20
CdSe conduction band edge investigated using magnetophonon effect L19–21
Caesium compounds
caesium dihydrogen arsenate, Raman scattering 3222–44
CsCl, anion-vacancy interaction 401–7
CsCl, impurity induced Raman scattering 493–501
CsI, diffusion of Xe L256–60
lattice dynamics 1038–45

Calcium compounds
calcium aluminate : stimulated emission cross section for Nd^{3+} within crystal lattice 1519–25
tungstate : ultrasonic study of elastic behaviour 3021–37
fluoride
diffuse scattering from defects 2677–88
effect of UV irradiation L283–6
investigation of F_2 centres 1475–88
investigation of F_3 centres 257–65, 266–74, 275–8
low-symmetry rare earth centres 997–1007
optical spectra analysis of Dy^{3+}-doped system 606–14
stress-induced mixing terms in anisotropic systems 3110–25
thulium relaxation 2629–50
oxide
colour centre 2543–52
electron paramagnetic resonance 338–52
emission spectrum of the F^+ centre 709–15
Jahn–Teller coupling in excited level of F^+ centre 2225–45
Camphor
relative permittivity transition 1969–75
Carbon
atom cluster study 1109–22
Carrier flow
through localized states in amorphous materials L267–9
Carrier transitions
effect on conductivity in $K_2Pt(CN)_4Br_{0.30}3(H_2O)$ L127–30
Cathodoexcitation
comparison with photoexcitation free-to-bound emission 511–7
Cathodoluminescence
emission intensity of CdS 1526–36
spectrum of Yb^{3+} in cadmium sulphide 2669–76
ZnSe 1914–20
Cation vacancy
interaction with anion vacancy in CsLi lattice 401–7
Cayley diagram
of point groups 732–7
Central diffraction spot
perturbation theory of electron beam modulation by laser light L80–4
Cerium compounds
electronic specific heats 1584–8
hydride, neutron diffraction study L35–40
cerium magnesium nitrate, phonon transport 828–42
Chain
disordered, localization L315–8
non-markovian, localized state 1183–95
polymer, cluster expansion 956–76
Chalcogenides
see also dichalcogenides
adsorption anisotropy L191–3
exchange interactions 1360–74
study of US, USe and UTe by neutron diffraction 3012–20
Charge distribution
silicon L299–302
Charged particle sputtering
trajectory deflection by incident beam field 1604–14
Charge transfer state
effect on optical transitions in S^2 ions 680–90
Cholesky decomposition
band structures of transition metal dichalcogenides 738–45
Clark–Gazis–Wallis model
dispersion curve of N_2 293–9
Classical-spin Heisenberg hamiltonian
used to calculate effect of biquadratic exchange on Curie temperature θ 316–8
Clebsch–Gordan coefficients
derivation of sum rule 55–62
Closed shell atoms
interaction in a dense liquid 2553–61
Cluster effects
disordered systems L209–12
examination of effective potentials for ^2E Jahn–Teller ions 2941–8
expansion for polymer chain 956–76
Cluster scattering
T and K matrices 1109–22
CNDO method
calculation of band structure of crystalline solids : lithium fluoride 15–20
study of interaction energy of two F^- ions L237–40
Cobalt
properties of Co^{2+} ion in $ZnWO_4$ 2949–60, 2961–75
Cobalt compounds
amorphous antiferromagnetism in cobaltous oxide/phosphorous pentoxide glasses L261–5
$CoCl_2 . 6H_2O$ spin-flop transition by nuclear orientation L197–200
Coherent potential approximation
application to disordered antiferromagnets (Mn, Co) F_2 and K(Mn, Co)F_3 2611–28
calculation of density of spin wave states in disordered magnetic chains 1082–8
metal–insulator transitions 906–13

Colour centres
CaO doped with Mg 2543–52
F centres in KCl γ-irradiated at room temperature 82–96
F centres produced by radiation in MgF_2 1553–62
F centres thermoluminescence of Cu-activated NaCl crystals 2827–33
F^+ centres, linear dichroism in CaO under uniaxial stress 2225–45
F_A^+ centres identified in Mg-doped CaO 2543–52
F_2 centres in CaF_2 and SrF_2 1475–88
F_3 centres in alkaline earth fluorides 257–65, 266–74, 275–8
Complex permittivity
theory 415–24
Computer studies
analysis of relaxation time 2317–22
simulation of crack propagation L271–4
simulation of electron channelling patterns 2117–28
study of transport processes under extreme conditions 1921–9
Conduction band edge
investigation in n-CdSe by magnetophonon effect L19–21
Conduction band state
of electrons, in metal–insulator transition 906–13
impurity band hopping at low temperature 43–54
Conductivity, electrical
carrier flow in amorphous materials L267–9
field dependent; Stark ladders in solids 914–27
geometrical effects in measurement of magnetoresistance 2867–80
AC, in terms of Green matrix 1817–29
in SnS_2 single crystals 2881–6
temperature dependence of transition rate in Pt and Ir compounds L127–30
Conductivity, optical
absorption of In 2503–10
Conductivity, thermal
analysis of relaxation time by computer 2317–22
effect of electric and magnetic fields on glass 1153–7
of solid helium L163–5
Continuous phase transition
Landau's theory extended to magnetic point groups 977–84
Continuum elastic theory
application to strain field around a point defect 374–8
Contravariant components
in representation matrices 985–9
Copper
approximate calculation of wavefunction 2323–32
thermoluminescence of activated NaCl crystals 2827–33
x-ray diffraction study of molten Cu–Ge alloys 2977–84
x-ray diffraction study of molten Cu–In alloys 2985–90
Copper bromide
$K\beta_2$ emission band 2259–66
Corepresentation, irreducible
of magnetic point groups 977–84
Correlation, short range
effect of surface plasmon dispersion 1757–72
Corundum
properties of $(3d)^4$ ions 3397–413
shape of APR lines in constant electric fields 3414–30
Coulomb interaction
correlation in atomic structure calculation L188–90
effect on energy levels in magnetic field 549–561
Coulomb potential
effect of repulsive core in a one-dimensional hydrogen atom 1799–805
Coupling
electron–phonon 1265–76
phonon 3168–84, 3332–45
sound in rotating liquid He II 721–31
spin–orbit 676–9
spin–phonon 3222–44
Covariant component
in representation matrices 985–9
Covalent compounds
3d density distribution 2267–75
Covalent spin transfer
EPR and ENDOR measurements for V^{2+} in $KMgF_3$ 243–56
Crack propagation study
in silicon L271–9
Critical concentration
against interaction range 1375–82
of a dilute Heisenberg ferromagnet 2805–12
Critical current
of a Josephson junction 1643–8
Critical index
spin dependence in Ising model L9–12
Critical isotherm
of the Ising ferromagnet 1429–44, 3085–96
Critical point phase transitions
in cooperative assemblies, 2392–404

Critical property
effect of nonmagnetic impurities in the Ising model 2813–26
effect of perturbation 933–55
Critical temperature
analysis of the anisotropic Ising model for a simple cubic lattice
determined for generalized Ising model for FCC lattice 435–49
Cross relaxation
two-step in ruby 1876–82
Cross sections
neutron and Raman, derived for hydrogen-bonded ferroelectrics 3168–84
Crystal class $\bar{6}m2$
choice of axes, reference elastic and piezoelectric properties L201–3
Crystal field anisotropy
effect on Curie temperature of an Ising ferromagnet 3387–96
Crystalline electric field
levels in NdP, NdAs and NdSb determined by neutron spectroscopy 2246–58
Crystalline solid
CNDO method for band structure 15–20
Crystal point group
integrity bases 2497–502
Crystal structure
of *meta*-nitroaniline L233–6
Cubic crystal
electron channelling patterns plotted and indexed by computer 2117–28
localized polarition modes 2757–61
variational groundstate for Jahn–Teller effect 852–62
Cubic electronic line
analysis of optical spectra of $CaF_2:Dy^{3+}$ 606–14
Cumulant average
application to disordered materials 3047–60
Curie temperature
effect of biquadratic exchange 316–8
effect of crystal field anisotropy 3387–96
for randomly dilute ferromagnetic models 3371–86
Current noise
measured in thin discontinuous films 2105–16
Current transmission
by a grid in an ion cell in He II 2998–3011
Cyclotron resonance
absorption of scattered radiation in InSb crystal L73–9
Debye temperature
calculated for alkali halides 2562–6
Debye–Waller factor
from elastic constants in compound crystals 1309–16
Decoration transformation
in higher spin and non-commuting pair interactions 3521–30
Defects, conformational
localized and resonance modes in polyethylene L185–7
Defect–impurity complex
in Cd F_2 crystals 1134–52
Defect structure
of CaF_2 with excess anions 2677–88
Deflection
of trajectory of charged particle sputtering 1604–14
Deformable-shell model
applied to properties of LiF crystals 1158–64
de Haas–van Alphen effect
electron lifetimes in InSb 2345–56
de Launay model
for Na dispersion curve 293–9
Dense fluid
calculation of density of localized states 1165–82
Density fluctuation
in simple liquids 3279–88
Density matrix
for muffin tin potential 1207–15
Density of states
localized states in a fluid 1165–82
spin wave states in disordered magnetic chains 1082–8
tight-binding band 2845–58
Diamagnetic exciton
in degenerate bands 549–61
Diamond
effect of N impurity of annealing of damage 2534–42
fluorescence lifetimes under UV radiation L1–4
lattice: numerical study of localization 807–20
study of C_2 atom cluster in lattice 1109–22
3d eight-vertex model of lattice 3429–37
photoconductivity 2762–8
Dichalcogenides
transition metal, band structure, octahedral coordination 746–58
transition metal, band structure, tight binding method 738–45
transition metal, band structure, trigonal prism materials 759–78
resistivity of $NbSe_2$ L154–6

superconductivity of $NgSe_2$ to 140 kbar L230–2
transmission spectra: octahedral coordination 3531–9
transmission spectra: trigonal prismatic coordination 3540–51
Dichroism
in emission spectrum of CaO F^+ centre 709–15
linear, due to stress-induced mixing of electronic states of anisotropic centres 3110–25
observed in $Y_3Fe_{5-x}Si_xO_{12}$ 481–92, 2200–4
Dielectric constant
electric polarizability of small metal particles 408–14
Dielectric crystal
optical modulation of an electron beam by a laser 1976–84
Dielectric matrix
of silicon L299–302
Dielectric properties
of NaCl 1345–59
Dielectric relaxation
in solid camphor 1969–75
Dielectric response function
calculated for interband transitions 1335–44
of alkali halides thin films 2511–22
Diffraction
atomic He, from solid surfaces 2098–104
pattern, investigation of surface cell L41–5
perturbation theory **L80–4**
study, x-ray of Cu–Ge alloy 2977–84
study, x-ray, of Cu–In alloy 2985–90
study, x-ray of Hg 2089–97
Diffractometer
to measure interference functions from liquid Hg 2089–97
Diffusion
coefficient, definition 3164–7
coefficient, in a liquid 353–65
coefficient, of electrons in a semiconductor 1563–72
function, consideration of hopping conductivity 1817–29
Diffusivity, energy dependent
definition 3164–7
Dilute spins
measurement of high-resolution spectra L226–9
Dipole–dipole interaction
magnon spectrum and thermodynamic properties of $GdCl_3$ 2205–16
Dipole–dipole relaxation
due to quantum tunnelling motions 2834–44
Dipole, magnetic
effect of addition of electric quadrupole on nuclear orientation 2077–88
Dirac equation
solution for a Tamm model 798–806
Dirac matrix
for a spherically symmetric potential L56–7
Direct current field distribution
theory of acoustoelectric oscillators 567–58
Directed bonding
statistical mechanics of water: lattice model 889–905
Disclination
partial in FCC crystal 529–34
Discontinuity shift
K absorption in As 793–7
Dislocated materials
derivation of strain distribution 1930–42
Dislocation theory
used to define long range order for 2D solids L124–6
Disordered systems
atomic vibrations in hexagonal ice 1028–37
atomic vibrations: two dimensional model 1017–27
chain, localization L315–8
cluster effects L209–12
electronic density of states 3322–31
electronic structure L13–16
generalized cumulant expansion 3047–60
spectral limit 360–5
Dispersion
of long-wavelength surface plasmons 1757–72
Dispersion curve
crystalline HCN 3309–21
lattice vibrations of polyethylene 2309–16
rubidium halides 543–48
sodium, using de Launay and CGW models 293–9
Displacement eigenvector
of disordered chain L315–8
Doping concentration
effect on spontaneous emission spectrum in n type GaAs 702–8
Dressed defect
lattice dynamics of interstitial impurities 2689–701
Drone fermion method
generalization L178–80
Droplet model
equation of state and correlation function 2785–804

Duality relation
between Ashkin–Teller and eight-vertex models L131–2
Dynamic Jahn–Teller effect
study of multi-frequency problem 2045–63
Dynamical matrix
techniques for determining relationships 1773–98
Dysprosium
anisotropy effect of zero point energy L85–8
Dysprosium phosphate
magnetothermal resistivity at low temperatures 450–58
Dysprosium vanadate
Jahn–Teller phase transitions in crystals 3126–46

Echo response
quasiquadrupolar, of methyl protons L89–93
Eigenvalue distribution
in one-dimensional random system 77–81
Eigenvector
displacement, of disordered chain L315–8
Eight-vertex model
duality relation with Ashkin–Teller model L131–2
equivalence with Ising model 3429–37
Elastic interaction
point defects in a cubic medium 374–78
Elastic properties
choice of axes for crystal class $\bar{6}m2$ L201–3
contribution of high order multipole three-body forces 2302–8
determination of vibrational amplitudes in compound crystals 1309–16
rôle in negative thermal expansion of solids 535–542
rutile structure crystals 1008–16
ultrasonic study of $CaWO_4$ 3021–37
Electric-dipole
intensity of Er^{3+} spectra in various host lattices 306–15
Electric field effect
APR spectra of Al_2O_3 containing Cr^{2+} or Mn^{3+} 3414–30
Electric polarizability
of small metal particles 408–14
Electric quadrupole interaction
on impurities of ^{102}Ir in Ni L303–6
Electrode blocking theory
comparison with polarization impedance of NaCl crystals 134–46
Electron beam
optical modulation by a laser beam 1976–84, L80–4
Electron channelling pattern
computer simulation of geometry 2117–28
Electron damage
effect on emission intensity of CdS 1526–36
Electron diffraction
investigation of surface unit cell L41–5
Electronegativity difference
used to estimate interaction with the cell of semiconductor alloy 821–7
Electron–electron screened interaction
near metal–semiconductor junction 2599–610
Electron energy loss spectra
for mica group and silicates 3153–60
renormalization in the s–d model L151–3
Electron–hole correlation
in disordered systems 1335–44
Electronic band structure
approximate calculation for wave-functions 2323–32
Electronic density of states
for model disordered systems 3322–31
Electronic parameters
for bismuth 3061–72
Electronic polaron
rôle in x-ray absorption 3259–63
small metal particles 408–14
Electronic properties
$Co(CN)_6^{3-}$ doped alkali halides 1511–8
Electronic relaxation
Pr 615–30
Electronic specific heat
Laves phases containing Nd 1573–83
$CeNi_2$ and $CeCo_2$ 1584–8
Electronic spectrum
Ni^{2+} in $NiCl_2$ and $NiBr_2$ 1253–64
Electronic states
disordered system 1183–95, 1196–206
surface states in Ge L146–50
Electronic structure
for a tight-binding band 2845–58
Electron irradiation
effect of boron concentration in irradiated silicon 379–400
Electron lifetimes
in InSb study using de Haas-van Alphen effect 2345–56
Electron mobility
impurity core effect in n-type Si 3473–6
Electron motion
in solids numerical solution 641–56
Electron–phonon interaction
calculation of tunnelling current 21–42

Mott expression, 2579–82
transport problems in nonparabolic semiconductors 159–186
zero phonon lines in vibronic spectra of irradiated Si 1265–76
Electron paramagnetic resonance
covalent spin transfer for V^{2+} in $KMgF_3$ 245–56
Mn^{2+} in MgO and CaO 338–52
properties of Co^{2+} in $ZnWO_4$ 2949–60
Electron proton resonance
experiment, analysis of 3d (t_{2g}) density distribution in covalent compounds 2267–75
Electron spin resonance
structure of free radicals L322–4
tunnelling methyl groups 631–40
tunnelling sidebands of methyl group hyperfine structure 1739–44
Fe^{3+} in phlogopite 3566–72
Electron temperature
deduced from free-to-bound emission 511–17
Electron transfer
high-frequency behaviour in InP and GaAs 3491–503
Electron transport
effects in solids 641–56
Electro-optic properties
of *meta*-nitroanaline L233–6
Electroreflectance
of GaSe single crystals L95–8
Emission-intensity
effect of electron damage on CdS 1526–36
Emission spectra *see Spectra*
ENDOR
measurement for V^{2+} in $KMgF_3$ 245–56
measurement of tunnelling splitting in methyl groups 518–28
Energy bands
of graphite and boron nitride 3097–100
Energy derivative
of Dirac matrix L56–7
Energy gap
bowing in substitutional semiconductor alloys 821–7
effect of atomic displacement from alloy lattice sites L27–30
Energy spectrum
Stark ladders in finite crystals 2149–55
Energy threshold
for displacement of Te in ZnTe 2283–8
Erbium
optical intensities of Er^{3+} in various host lattices 306–15
Erbium compounds
erbium gadolinium aluminate, spectroscopic study 1705–15
oxide, spectroscopic properties, 2921–40
erbium-vanadate, magnetothermal resistivity at low temperatures 474–80
Exchange-correlation energy
contribution of RPA dielectric constant L188–90
Exchange-interactions
in chalcogenides 1360–74
in magnetic insulators 2217–24
Exchange striction
Mn^{2+} pairs in MgO and CaO 338–52
Excitation mechanism
sensitization of photoluminescence in ZnSe 502–10
Excitation spectra
antiferromagnetic model 2896–902
van Vleck paramagnets L194–6
Excitons
attraction in metal–insulator transition L119–23
bound, luminescence in InP and GaAs 1727–38
condensation in Ge and Si 2369–91
diamagnetic, in degenerate band 549–61
magnetic, behaviour as function of temperature in cubic systems L157–61
Expansion technique
study of critical behaviour of Ising ferromagnet with impurities 1830–58
Expansion, thermal *see Thermal expansion*

Faber–Ziman theory
resistivity of liquid alloys, applied to Mg–Sn 2991–7
Face-centred cubic crystal
antiferromagnetic dispersion, absorption and light scattering 1859–75
high-temperature specific heat 2138–48
interstitial migration 3296–308
self-dual property L181–3
study of partial disclination in a twin 529–34
Fermi surface
study of $C_{4600}Br$ to $C_{140}Br$ 2163–78
Ferroelectrics
hydrogen-bonded, theory 3168–84, 3185–221, 3222–44
Ferromagnets
amorphous, possibility of a new type L107–9
amorphous, spin wave theory L65–9
dipole–dipole interaction in $GdCl_3$ 2205–16
insulators, attenuation and frequency shift of acoustic waves 2903–8

Ising, consideration of nonmagnetic impurities using series expansion approach 1830–58
Ising, critical isotherm 1429–44, 3085–96
magnetic scattering in US 2427–44
narrow-band solid 664–75
model, containing random nonmagnetic impurities 3371–86
model, effect of crystal field anisotropy on Curie temperature 3387–96
percolation theory and the critical concentration 2805–12
soft modes in single ground state L157–61
spin-wave states in Heisenberg chain 1082–8
spin wave theory L65–9, 319–29, 3504–20
static correlation function at critical temperature 1383–98

Field anisotropy
approximation in Ising magnet 2445–59
distribution in acoustoelectric oscillator 567–81
effect on APR spectra of Al_2O_3 3414–30
effect on optical properties of small polaron 1687–704
in Ising ferromagnet 3387–96
transport in PbTe 2746–56

Finite crystal
existence of Stark ladders 2149–55

First order phase transitions
in cooperative assemblies 2392–404

Fluid density
effect on van der Waals interaction between rare gas atoms 2553–61

Fluorescence
spectra of UV excited diamonds L1–4
lifetime used to determine stimulated cross section for Nd^{3+} in $CaO.2Al_2O_3$ 1519–25

Fluorides
ionic distortions by Tm^{2+} trigonal centres 863–70

Fluorine
interaction energy L237–40

Flux
intensity in GaAs 199–211
pinning current in rough surfaces of superconductor 147–58
thermal acoustic, in GaAs 199–211

Formation energy
of vacancy pairs in crystals of CsCl type 401–7

Free annihilation
parapositronium lifetime in water 3273–8

Free-electron-like conduction band
in rare earth compound: metallic Ce 63–76

Free-electron model
solution of quantum size effect 2591–8
solution of Schrödinger's equation 2583–90

Free energy
SCF theory of polymer excluded volume L171–3

Free-to-bound emission
deduction of electron temperatures 511–17

Frequency distribution spectrum
indium 3161–3

Frequency domain measurements
Green phosphorescence of ZnSiCu 787–90

Frequency shift
of acoustic waves in ferromagnetic insulators 2903–8

Fundamental loss mechanism
of spin-flip Raman laser L73–9

g shift
observed for Gd L99–101

Gadolinium
interpretation of ground state splitting 3101–9
observation of *g* shift L99–101

Gadolinium chloride
magnon spectrum and thermodynamic properties 2205–16

Gadolinium vanadate
magnetothermal resistivity at low temperatures 459–73

Gallium compounds
GaN, band structure 3462–8
GaP, effect of irradiation on concentration of boron L46–9
GaP localized vibrations due to nitroimpurity L223–5
GaSe, absorption coefficient L95–8
GaSe, electroreflectance in the higher interband L95–8
GaS, low energy photoemission spectra 1222–5

gallium arsenide
acoustoelectric current 199–211
acoustoelectric gain 3477–90
bound exciton luminescence 1727–38
diffusion coefficient in high electric field 1563–72
electron transfer 3491–503
infrared absorption by point defects 1883–92
$K\beta_2$ emission band 2259–66

lattice attenuation 199–211, 3477–90
localized vibrational modes for crystals containing Si and Br 1999–2010
resistivity L113–8
slow domains and negative resistance 187–198
solution of Boltzmann equation 212–24
spontaneous emission spectrum 702–8
Galvanomagnetic tensor component
of bismuth 3061–72
Generators
for point groups 732–7
Germanium
band edge determination 300–5
condensation of excitons 2369–91
electronic surface states L146–50
free carrier magneto-microwave Kerr effect 928–32
$K\beta_2$ emission band 2259–66
positron lifetime spectra 779–86
x-ray diffraction study of molten alloys with Cu 2977–84
Glass
amorphous antiferromagnetism in iron and cobalt phosphorus pentoxide glasses L261–5
effect of electric and magnetic fields on thermal conductivity 1153–7
organic, study of molecular motion 1903–13
soda, effect of Tb^{3+} ion on optical properties 1716–26
thermal expansion at low temperature 1943–4
Graphite
optical properties 3097–100
Graphite–bromine
study of Fermi surfaces by Shubnikov-de Haas effect 2163–78
Green function
calculation of density of surface states for Gd L146–50
computation for long range interaction defect in a crystal 287–92
decay, degree of localization in 3D disordered system 1059–66
electronic, calculated using nonorthogonal basis functions 1053–68
of electron in random array 1183–95
of NaCl 1345–59
validity for overlapping potentials L23–26
Ground state
energy of Hubbard hamiltonian for surface molecules L70–1
for dynamic Jahn–Teller effect 852–62
splitting for Gd^{3+} 3101–9
wavefunction of helium L311–4
Grüneisen parameter
Al_2O_3 1046–58
Tl 2129–37
TlBr 1589–603
TlCl 1589–603

Haematite
magnon interaction, energy of optical mode 1226–36
Hafnium
band structures of transition metal dichalcogenides 746–58
Hall coefficient
in GaAs 212–24
in random phase model of a disordered system L247–9
resistivity in solids and disordered systems L241–6
Hall effect
estimate of anomalous resistivity 1072–81
in hopping impurity conduction 1649–56
of rectangular plate 2867–80
Hall mobility
in GaAs 212–24
in iron-rich Ni ferrites 2859–66
Harmonic model
study of neutron inelastic scattering of strontium titanate 2711–30
Harmonics
response of an untuned wide-band lock-in amplifier L169–70
Hartree–Fock method
study of interaction energy of two F^- ions L237–40
Heat capacity
indium 3161–3
Heavy water
anomalous parapositronium lifetime 3273–8
Heisenberg antiferromagnet
two-magnon Raman scattering 1461–74
chain, spin wave state 1082–8
Heisenberg ferromagnet,
hamiltonian to calculate effect of biquadratic exchange 316–8
spin wave theory 319–29
Heisenberg model
decoration transformation 3521–30
high temperature series expansion 1675–86
Heisenberg system
magnetothermal resistivity of $GdVO_4$ crystal 459–73
Helium
diffraction from solid surfaces 2098–104
phonon scattering on Ag 3438–50
phonon transmission L166–8

Raman scattering L287–91
scattering L139–42, L287–91, 2098–104, 3438–50
sound coupling 721–31
thermal conductivity L163–5
two-proton bound states L287–91
wavefunction L311–4
Hexamethylethane
pressure dependence of self-diffusion in crystals L50–51
High electric field
effect on optical properties of small polaron 1687–704
High field transport
in p-type PbTe 2746–56
High magnetic fields
magnetoacoustic oscillations in Sn-doped Bi 3073–84
High temperature expansion
for randomly dilute ferromagnetic models 3371–86
zero field susceptibility of Ising model 3387–96
Hilbert space theory
relaxation rate spectrum for phonon 5–14
Hole trapping
Mössbauer evidence from UV excitation of rutile containing adsorbed Fe^{3+} 3147–52
Hopping conductivity
gallium arsenide L113–8
nickel ferrite 2859–66
terms of 'diffusion function' 1817–29
tin sulphide 2881–6
impurity conduction, absorption contribution to Hall effect 1649–56
Houston method coefficients
approximation of Debye temperature for cubic crystals 2562–6
Hubbard hamiltonian
ground state energy for surface molecules L70–1
magnetic properties 664–75
Hybrid nearly-free-electron
tight binding form 97–120
Hydride ions
paired with RE^{3+} in CaF_2 997–1007
Hydrodynamics
expression for density fluctuation in simple liquids 3279–88
Hydrogen bonded ferroelectrics
theory 3168–84, 3185–221, 3222–44
Hydrogen cyanide
lattice dynamics 3309–21
evolution in Nb 1293–300
Hydrogen
one-dimensional atom with repulsive core 1799–805
solution in Nb: phase equilibria 1293–300
solution in Nb: thermodynamic data 1301–8
Hyperfine interaction
in mixed magnetic dipole and electric quadrupole 2077–88
structure of free radicals L322–4
Hypernetted chain equation
determination of effective pair potentials for liquid Na and K 1277–83
Hypersensitivity
optical spectra of Er^{3+} 306–15

IBMOL V method
study of interaction energy of two F^- ions L237–40
Ice
hexagonal, study of atomic vibrational property 1028–37
Impurities
effect of inclusion in Ising ferromagnet 1830–58
effect of transition metals on optical properties of mica 879–87
effect on electron mobility in n-type Si 3473–6
electric quadrupole interaction on ^{192}Tr in Ni L303–6
far infrared absorption in Ar doped with Kr or Ne 3264–72
infrared absorption in GaAs 1883–92
interstitial, lattice dynamics 2689–701
low-temperature band, hopping conduction 43–54
non-magnetic effect on critical properties of the Ising model 2813–26
paramagnetic, effect on tunnelling current through superconductor–insulator–superconductor junction 1806–16
random distribution in a ferromagnetic model 3371–86
rare earth, low symmetry centre in CaF_2 997–1007
Impurity, conduction
absorption contribution to Hall effect 1649–56
Incident beam field
deflection of charged beam sputtering 1604–14
Indium
frequency distribution spectrum and heat capacity 3161–3
optical absorption 2503–10
Indium alloys
nuclear spin relaxation, liquid alloys 1284–92
x-ray diffraction study of molten CuIn alloys 2985–90

Indium antimonide
electron lifetime 2345–56
laser, loss mechanism L73–9
Indium phosphide
dynamical behaviour of electron transfer 3491–503
photoluminescence spectrum L110–2, 1727–38
phonon frequency from Raman spectrum L275–8
Inert gas solids
anharmonic corrections to $C_V/3Nk$ 2138–48
Infinite-range interaction
exact model for critical phenomena 1–4
Infrared spectra
emission, ZnSe 1914–20
of rare earth oxides 1237–52
Insulators
antiferromagnetic, magnon sideband in optical transition 1445–60
magnetic, exchange interaction 2217–24
Integrity bases
for invariants of crystal point groups 2497–502
for point groups 732–7
Interaction
of two F^- ions L237–40
Interaction range
determination of formal bounds for critical concentration 1375–82
Interband transitions
statistical electron–hole correlation in disordered system 1335–44
Interference functions
Cu–Ge alloys 2977–84
Cu–In alloys 2985–90
Mg–Sn alloy 2991–7
Interstitial migration
in FCC lattice 3296–308
Intramolecular interactions
in a polymer chain 956–76
Ion–electron–ion interaction
relation with rigid neutral atom density L213–5
Ion–ion potential
in liquid metals 1745–56
rutile model 1008–16
transition, S^2 680–90
Ionic crystals
energies of formation of Schottky defects L5–8
distortion, Fm^{2+}–H^-(s) trigonal centres in fluoride lattice 863–70
Ionic thermal current
dependence on Na and Y impurities in CdF_2 crystals 1134–52
Iridium compounds,
temperature dependence of conductivity L127–30
impurities in Ni L303–6
Iron
hole trapping by ferric acceptor states on rutile surfaces 3147–52
paramagnetic resonance in CdS crystals 716–20
thermally modulated absorption of Fe^{2+} ions in micas 1991–8
ferrous ions, effect on acoustic resonance in ruby crystals L136–8
BCC, wavefunction calculation 2323–32
Iron compounds
$(Fe_2O_3)\,P_2O_5$ amorphous antiferromagnetism in glass L261–5
ferrous difluoride, magnon and phonon interaction 2769–84
Irradiation
causing magnetization switching in $Y_3Fe_{5-x}Si_xO_{12}$ specimen 2200–4
effect on boron concentration in gallium phosphide L46–9
Irreducible corepresentation
of magnetic point groups 977–84
Ising model
anisotropic, critical behaviour 231–44
droplet model, equation of state and critical amplitudes 2785–804
effect of nonmagnetic impurities on critical properties 2813–26
expansion, compared with cluster expansion for polymer chain 956–76
ferroelectrics 3185–221
ferromagnet series expansion technique for study of effect of impurities on critical behaviour 1830–58
ferromagnet, critical isotherm 1429–44, 3085–96
ferromagnet, field anisotropy 3387–96
generalized, critical behaviour 435–49
magnet, spin–phonon interaction 2445–59
magnetothermal resistivity of $DyPO_4$ crystal 450–58
self-dual relation L253–5
spin dependence, L9–12
term structure of series expansion 1399–416
weighting of graph 1417–28
Iterative numerical method
for evaluating electron motion in solids 641–56

Jahn–Teller effect
acoustic anomalies in crystals 3126–46
F^+ centre in CaO 2225–45
effective potentials examination 2941–8

multi-frequency dynamic interaction 2045–63
phonon induced shift of spectral lines 2665–8
$TmAsO_4$ induced phase transitions 1501–10
$TmVO_4$ induced phase transitions 1501–10, 2027–36
variational groundstate 852–62
Josephson double junction
temperature dependence of critical current 1643–8
Junction tunnelling
influence of properties of materials 2179–91

Kapitza resistance
effect of LE vibrational modes 1216–21
effect of phonon scattering L166–8
$K\beta_2$ emission bands
Ge, GaAs, ZnSe and CuBr 2259–66
Kerr effect
free carrier, magneto-microwave, in p-type Ge 928–32
Kinetic emission
solid compounds subjected to ionic bombardment 2192–9
Kinetics of evolution
of dilute H_2 in Nb 1293–300
K matrix
in cluster scattering 1109–22
Kramers doublet
Tm^{2+} relaxation in CaF_2 and SrF_2 2629–50
Kramers–Kronig analysis
$MoTe_2$, calculation of optical constants 1101–8
Kronig–Penney δ model
solution of quantum size effect 2591–8
solution of Schrödinger's equation 2583–90
Kronig–Penney potential
solution of Dirac equation for an electron 798–806

Ladder structure
weight of configurations entering high-temperature expansions for Ising models 1417–28
Lambda line
scattering of light by liquid He L139–42
Landau quantization
included in quasiclassical model of quantum plasma 3245–52
theory of continuous phase transition 977–89
Lanthanum magnesium nitrate
Pr resonance 615–30

Lasers
optical modulation of an electron beam 1976–84
light modulation of electron beam in a crystal L80–4
light modulation loss mechanism L73–9
stimulated cross section for Nd^{3+} in $CaO.2Al_2O_3$ 1519–25

Lattice dynamics
attenuation in GaAs 199–211, 3477–90
determination of Debye–Waller factors 1309–16
of alkali halides 1038–45
of crystal containing a point defect 287–92
of HCN 3309–21
of indium 3161–3
of interstitial impurities 2689–701
of rubidium halides 543–48
of sodium, comparison of de Launay and CGN models 293–99
of strontium fluoride 2702–10
of strontium titanate 2711–30
relationship determined by spectral decomposition techniques 1773–98
mode of KBr L307–9
model of superantiferromagnetism 2460–7
model of water 889–905
triangular high-temperature expansions, on Ising models L9–12
vibration of polyethylene 2309–16

Laves phases
low temperature specific heats of compounds containing Nd 1573–83

Lax's formalism
used to investigate cluster effect in a disordered system L209–12

LCAO method
calculation of valence states of silver fluoride 562–66

Lead
high-field transport behaviour 2746–56

Lead telluride
phonon-exciton spectrum 2179–91

LEED
investigation of surface cell L41–5
theory of averaged data 2567–78
Lennard–Jones potential
of He L311–4
Ligand contribution
determined for dominant component of Gd^{3+} 3101–9
Light scatter
by liquid He close to λ line L139–42
in NiO and other FCC crystals 1859–75

Linear dichroism
due to stress-induced mixing of electronic states of anisotropic centres 3110–25
in silicon doped yttrium iron garnet $Y_3Fe_{5-x}Si_xO_{12}$ 481–92
Lineshape analysis
APR spectra of Al_2O_3 in constant electric field 3414–30
Liquid alloy
Faber–Ziman theory for resistivity 2991–7
Liquid metal
electrical resistivity L175–7
ion–ion potential 1745–56
Lithium fluoride
application of deformable shell model to crystal properties 1158–64
CNDO method for band structure 15–20
effect of melting on infrared spectra 2276–82
gas atom–crystal surface potential L143–5
rôle of electronic polaron in soft x ray absorption 3259–63
Lithium tungstate, anhydrous
Mössbauer velocity spectra measured using ^{183}W line 2523–33
Lloyd's model
localization distance 77–81
Local density theory
for spin polarized case 1629–42
in disordered chain L315–8
in three dimensional disordered system 1059–66
numerical study in disordered systems 807–20
Localization centre
in an orientationally disordered system; two dimensional model 1017–27
Localization distance
for a Lloyd's model in one dimension 77–81
Localized mode
in polyethylene due to kinks and folds L185–7
Localization range
for one dimensional random systems 77–81
Localized orbital
of electrons, in metal–insulator transition 906–13
Localized polariton mode
of small cubic crystals 2757–61
Localized states
calculation of density in a fluid 1165–82
electronic states of a disordered system 1183–95
in amorphous material L2677–88
in band gaps of amorphous semiconductors L13–16
Localized vibration
in GaP due to N impurity L223–5
of Si and Br in GaAs crystal 1999–2010
Local potential
calculated using generalized MST L293–8
Longitudinal relaxation
in liquid In–Bi, Pb and Tl alloys 1284–92
Long range order
for a 2D solid L124–6
Loss mechanism
of Raman laser L73–9
Low energy vibrational mode
effect on Kapitza resistance 1216–21
Low-symmetry complex
rare earth impurities in CaF_2 997–1007
Luminescence
lifetime of recombination transitions in alkali halides 1537–52

Magnesium
impurity in CaO crystal 2543–52
oxide, electron paramagnetic resonance 338–52
tin alloy, resistivity 2991–7
Magnesium fluoride
radiation damage process 1553–62
valence band structure 1945–52
Magnetism
dipole intensity
of Er^{3+} spectra in various host lattices 306–15
energy
spectral diffusion in paramagnetic crystal 843–51
insulators
exchange interaction 2217–24
ordering
effect on phonon spectrum 2482–96
in uranium monochalcogenides 3012–20
point groups
irreducible corepresentation 977–84
properties
of $BaPrO_3$ and $BaTbO_3$ 2887–95
of the Hubbard hamiltonian 664–75
theory for rare earth compounds 63–76
effects of longitudinal magnetic field on ultrasound in $SrTiO_3$ 2419–26
switching by infrared irradiation 2200–4
magnetoacoustic oscillations in Sn-doped Bi 2405–18, 3073–84
effect of zero-point energy correction in Dy L85–8

Magneto-microwave Kerr effect
in p type Ge 928–32
Magnetophonon effect
in p type Te 3332–48
oscillatory structure 1657–74
used to investigate conduction band edge in n-CdSe L19–21
Magnetoresistivity
coefficient for Bi 3061–72
geometrical effects 2867–80
Magnetothermal conductivity
in Al_2O_3 3397–413
in $ErVO_4$ 474–80
Magnons
energy of optical mode in haematite 1226–36
interaction in haematite 1226–36
interaction in iron fluoride 2769–84
phonon interaction used to study modification to Raman spectrum due to magnetic ordering 2482–96
sideband in optical transitions in antiferromagnetic solids 1445–60
spectrum of $GdCl_3$ 2205–16
Manganese
electron paramagnetic resonance in MgO and CaO 338–52
gallium carbide, Mössbauer spectrum L319–21
oxide ion in KBr L307–9
zinc fluoride, absorption 2011–26
Many-body effects
at metal–semiconductor junction 2599–610
Many-body interaction
transition in cooperative assemblies 2392–404
model system for interactions 1–4
Markov flipping
simple descriptive model 990–6
Matrix element
basis for model of anisotropic super-exchange interaction 1089–1100
in H–NFE–TB representation 97–120
involving open shell states at two centres 3253–8
Meissner current
in rough surface of superconductors 147–58
Melting
effect on infrared spectra of KBr, NaCl and LiF 2276–82
Memory effect
conductance switching in liquid selenium 366–73
function for diffusion and velocity determination 353–65
Mercury
x ray diffraction study to 150°C 2089–97
Metal–insulator transition
attraction of exciton under vacuum polarization L119–23
coherent potential approximation 906–13
in VO_2 1317–34
Metal–semiconductor junction
many-body effects 2599–610
Meta-nitroaniline
crystal structure and electro-optic properties L233–6
Metastability
for a 2D solid L124–6
Methyl group
effect of tunnelling rotation on sidebands of hyperfine structure 1739–44
electron spin resonance hyperfine structure 631–40
NMR experiments on random hindered rotation 990–6
proton dipole–dipole relaxation 2834–44
comparison with proton spin symmetry L204–8
tunnelling rotation frequency in irradiated crystals 518–28
echo response to in-phase and RF pulse sequences L89–93
Mica
electron energy loss spectra 3153–60
electron spin resonance of Fe^{3+} in phlogopite 3566–72
optical properties in vacuum ultraviolet 879–87
thermally modulated absorption of Fe^{2+} ions 1991–8
Microwave radiation
from surface of p type Ge 928–32
Mobility edge
nature of electronic states in a disordered system:
extended 1196–206
localized 1183–95
energy-dependent, definition 3164–7
Mobility, energy-dependent
definition 3164–7
Molecules
molecular dynamics
interstitial migration in FCC lattice 3296–308
molecular field approximation
spin–phonon coupling in the compressible Ising magnet 2445–59
molecular motion
in NMR 990–6
in polymerized solids 2289–301
in supercooled liquids and glasses 1903–13

molecular orbital theory
band structures of transition metal dichalcogenides 738–45
Molybdenum
band structures of transition metal dichalcogenides 759–78
nonlinear optical polarizability in molybdates L133–5
second harmonic generation coefficients in molybdates L133–5
optical constants of molybdenum telluride 1101–8
Monatomic FCC crystal
coefficients for linear dependence of stress tensor 3289–95
Monte Carlo method
study of dynamical behaviour of electron transfer in GaAs and InP 3491–503
Morphic effect
symmetry of optical phonons in magnetic crystal 2468–81
analysis of $3d(t_{2g})$ density distribution in covalent compounds 2267–75
Mössbauer effect
in Li_2WO_4 2523–33
in rutile surfaces 3147–52
molecular motion in supercooled liquids and glasses 1903–13
hole-trapping by ferric acceptor 3147–52
spectrum of Mn_3GaC L319–21
Mott expression
for electron–phonon interaction 2579–82
Muffin tin potential
canonical density matrix 1207–15
used to calculate band structure of GaN 3462–8
Multiphonon infrared absorption
spectra of molten KBr, NaCl and LiF 2276–82
Multiple scattering theory
by non-muffin-tin potentials L293–8
Multipole force
contribution to elastic constants and zero point energy of rare gas crystals 2302–8

Narrow-band solid
ferromagnetism of 664–75
Nearest neighbour approximation
calculation of electronic Green function 1953–68
Negative thermal expansion
of axial solids 535–42
Neodymium
crystalline electric field levels determined by neutron spectroscopy 2246–58
specific heats of compounds 1573–83
stimulated emission cross section 1519–25
Neutral atom model
calculation of displaced charge density 2333–44
study of ion–electron–ion interaction L213–5
Neutron diffraction study
of $BaPrO_3$ and $BaTbO_3$ 2887–95
of magnetic ordering in uranium monochalcogenides 3012–20
of nonstoichiometric cerium hydride L35–40
Neutron spectroscopy
determination of crystalline electric field level in NdP, NdAs and NdSb 2246–58
electric quadrupole interaction on dilute impurities of ^{192}Ir L303–6
Nickel
nickel bromide
electronic spectra 1253–64
nickel chloride
electronic spectra 1253–64
nickel ferrites
Hall mobility measurements 2859–66
nickel oxide
antiferromagnetic dispersion, absorption and light scattering 1859–75
exchange interactions in magnetic insulators 2217–24
Raman scattering 1461–74
Niobium
hydrogen system, thermodynamic data 1301–8
phase equilibria and kinetics of evolution 1293–300
niobium selenide
resistivity L154–6
superconductivity temperature to 140 kbar L230–2
Nitrate glass
study of positron lifetime 1067–71
Nitroaniline
meta-, crystal structure L233–6
Nitrogen
effect of impurity on annealing of damage in diamond 2534–42
Noise, current
measured in thin discontinuous films 2105–16
Nonmagnetic impurities
effect on critical properties of the Ising model 2813–26
Nonohmic transport
in nonparabolic conductor 159–86
in polar semiconductors 3349–70

Nonorthogonal basis function
used in calculation of electronic Green functions 1953–68
Nonparabolic conductor
ohmic and nonohmic transport properties 159–86
Nonstoichiometric cerium hydride
neutron diffraction study L35–40
Nontransition metals
theory of surface dipole 225–30
Norbornylene
pressure dependence of self diffusion in crystals L50–5
Nuclear magnetic resonance
hyperfine structure 2077–88
molecular motion 990–6
used to identify electric quadrupole interaction on ^{192}Ir in Ni L303–6
Nuclear orientation
study of a quadrupole interaction added to a magnetic dipole 2077–88
Nuclear spin relaxation
in liquid alloys of In 1284–92
measurement of pressure dependence of self diffusion in plastic crystals L50–5

Octahedral coordination
band structures of transition metal dichalcogenides 746–58
in transmission spectra of transition metal dichalcogenides 3531–9
Offdiagonal disordered system
approximation of perturbation series for one-electron two-site Green function 1165–82
Ohmic transport property
in nonparabolic semiconductor 158–86
Olivine
thermally modulated absorption 1991–8
One-dimensional random system
relation of distribution eigenvalue to range of localization 77–81
One-phonon contribution
scattering of atoms from surface 3438–56
One-phonon Green function
of NaCl 1345–59
One-phonon sideband
emission spectrum of the F^+ centre in CaO 709–15
Open shell states
parametrization of matrix elements 3253–8
Optical emission spectrum
of Dy^{3+} doped calcium fluoride 606–14
Optical mode energy
of magnon interaction in haematite 1226–36

Optical properties
of GaS crystals 1222–5
of mica in the vacuum ultraviolet 879–87
of molybdates L133–5
of molybdenum telluride 1101–8
of small polaron in high-electric fields 1687–704
of Tb^{3+} doped soda glass 1716–26
Optical pumping
absorption of F_2 centres in CaF_2 and SrF_2 1475–88
Optical transitions
in d^{10} ions 691–701
in s^2 ions 680–90
magnon sideband in antiferromagnetic solids 1445–60
Organic compounds
$C_{28}H_{58}$, and $C_{42}H_{86}$ absorption of thin film 871–8
cyclohexane, pressure dependence of self diffusion in crystals L50–5
diphenyl-2-picryl hydrazyl, ESR structure L322–4
Orientationally disordered systems
atomic vibrations in hexagonal ice 1028–37
two dimensional model 1017–27
Oscillation, magnetoacoustic
in Sn-doped Bi with a magnet field 2405–18
Oscillator, acoustoelectric
computer simulation 657–63
saturation region 582–94
static field distribution 567–81
anharmonic, model 330–7
Oscillator, current characteristic
of Stark ladder electron 914–27
Oscillatory structure
of transverse magnetophonon effect 1657–74
Overhauser effect
observed in spectrum of $^{29}Si^1HCl_3$ L58–63
Overlap effect
transport problems in nonparabolic semiconductors 159–186
Overlapping potential
validity of KKR equation L23–26
Oxide layer
effect on positron lifetime spectra of semiconductors 779–86
Oxygen
adsorption on Al L102–5

Pair potential
for liquid Na and K 1277–83

Paraffin
ultraviolet absorption of thin films 871–8
Paramagnetism
acoustic attenuation 2064–76
excitation spectrum L194–6
resonance of CdS:Fe:Ag 716–20
spectrum of Mn_3G or C L319–21
theory of phonon avalanche
spatial phonon transport 828–42
spectral diffusion of magnetic energy 843–51
Parapositronium lifetime
in water and heavy water 3273–8
Partial disclination
in FCC crystal 529–34
Partial interference function method
resistivity of liquid alloy 2991–7
x ray diffraction study of:
Cu–Ge alloy 2977–84
Cu–In alloy 2985–90
Percolation theory
critical concentration of disordered ferromagnet 2805–12
Permittivity
relationship of spectral density to autocorrelation function 415–24
transition in solid camphor 1969–75
Perovskite
carbide, spectrum L319–21
magnetic properties of $BaPrO_3$ and $BaTbO_3$ 2887–95
Perturbation
effect on critical properties of system 933–55
series for cluster expansion for polymer chain 956–76
theory of four-dimensional spherical model 933–55
theory of electron beam modulation L80–4
Phase equilibria
of dilute H_2 in Nb 1293–300
Phase shift
construction of canonical density matrix 1207–15
Phase transitions
in solids 1067–71
in $TmAsO_4$ 1501–10
in $TmVO_4$ 1501–10, 2027–36
in VO_2 1317–34
Phlogopite
electron spin resonance of Fe^{3+} 3566–72
Phonons
amplification in polar semiconductors 3349–70
coupling in ferroelectrics 3168–84
coupling in magnetophonon resonance in p type Te 3332–48
dispersion curve of strontium fluoride 2702–10
excitation spectra of Pb and Sn from electron tunnelling characteristics of junctions 2179–91
frequency from Raman spectrum of InP crystal L275–8
induced shift of spectral lines 121–33, 2665–8
phonon interaction in FeF_2 2769–84
optical phonons in $ZnSiP_2$ 1893–902
symmetry of optical phonons in magnetically ordered crystals 2468–81
phonon–phonon interaction in NaCl 2909–20
relaxation rate spectrum 5–14
softening in VO_2 1317–34
transmission through a solid–liquid ^4He interface L166–8
transport in $Ce_2Mg_3(NO_3)_{12}.24H_2O$ 828–42
Phosphorescence
in ZnS:Cu 787–90
Photoconductivity
in irradiated diamond 2762–8
Photoemission spectrum
of GaS single crystal 1222–5
Photoexcitation
comparison with cathodoexcitation free-to-bound emission 511–17
Photoionization
of Zn impurity in Si 1985–90
Photoluminescence
excitation of Er^{3+} emission in ZnSe 502–10
spectrum of excitons in InP and GaAs L110–2 1727–38
Physical properties
of liquid metal using ion–ion potentials 1745–56
Picryl-n-amino carbazyl
ESR structure L322–4
Piezoelectric properties
choice of axes $\bar{6}m2$ class crystals L201–3
Piezomagnetic effect
in amorphous ferromagnet 3504–20
Plasma dynamics
quasiclassical model 3245–52
Plasmon
dispersion, correlation 1757–72
resonance in magnetic field 3245–52
Platinum compounds
conductivity in $K_2Pt(CN)_4Br_{0.30}3(H_2O)$ L127–30
Point defects
effect on lattice dynamics of a crystal 287–92

elastic interaction in a cubic continuum 374–78
Point groups
generators and integrity bases 732–7
singular matrix representations L279–81, 985–9
Polaritons
in $ZnSiP_2$ 1893–902
localized mode of small cubic crystals 2757–61
Polarizability
of small metal particles 408–14
dependence of two-photon absorption coefficient in crystals 2651–64
force between excitons in a metal-insulator transition L119–23
impedance of NaCl crystals 134–146
Polar mode scattering
effect on linearized Boltzmann equation 212–24
Polaron
optical properties in high electric fields 1687–704
rôle in x ray absorption 3259–63
Polar semiconductors
non-ohmic transport and phonon amplification 3349–70
Polyethylene
lattice vibrations 2309–16
localized and resonance modes due to defects L185–7
ultraviolet absorption of thin films 871–8
Polymers
cluster expansion 956–76
motion of molecules in polymerized solids 2289–301
positron annihilation study 2156–62
ultraviolet absorption spectra of polyethylene and paraffins 871–8
Positron lifetime
in high polymers 2156–62
in solids 1067–71
surface effect in semiconductors 779–86
Potassium
potassium bromide
dielectric response of thin films 2511–22
effect of melting on infrared spectra 2276–82
Raman spectrum of crystals 595–605
UV excitation of TSC in crystals 279–86
vibronic spectrum L307–9
potassium chloride
thermoluminescence and annealing of F centres 82–96
potassium dihydrogen arsenate
Raman scattering 3222–44
potassium halides
containing Cu^+ ions 691–701
potassium iodide
UV excitation of TSC in crystals 279–86
potassium, liquid
effective pair potential 1277–83
potassium magnesium fluoride
measurement of covalent spin transfer 245–56
potassium phosphate
understanding of dynamical properties 3168–84
Potential
Dirac matrix L56–7
effect in band theory of quantum size effect L17–8
study of interaction energy of two F^- ions L237–40
interionic model in theory of surface states 3469–72
muffin tin and spherical 1207–15
quadrupole potential in diamond-type semiconductors 2357–68
validity of KKR equation L23–26
Praseodymium
resonance observed in electronic spectrum 615–30
Presentation
of a point group 732–7
Protons
comparison of proton spin symmetry with methyl group rotation L204–8
relaxation due to tunnelling methyl groups 631–640
Pseudo-boson operator
in theory of dispersion, absorption and light scattering in FCC crystals 1859–75
Pseudopentagonal twin
partial disclinations in crystals 529–34
Pseudopotential
calculation of photoionization of Zn in Si 1985–90
definition using expression for resistivity of liquid metal L175–7

Quadrupolar echo, quasi-,
from solids L89–93
Quadrupole
effect of addition to magnetic dipole on nuclear orientation 2077–88
interaction on impurities in Ni L303–6
Quadrupole potential
phonon-induced in diamond-type semiconductor 2357–68
Quantum magnetic field effect
calculated using quasiclassical model 3245–52

mechanical tunnelling in ferroelectrics 3168–84
Quantum size effect
band theory L17–8, 2591–8
Quasiquadrupolar echo
from solids L89–93

Radial distribution function
construction of canonical density matrix 1207–15
Radiation damage
effect of N impurity on annealing of diamond 2534–42
MgF_2 1553–62
Raman laser, spin-flip
study of InSb crystal L73–9
Raman peak
behaviour of antiferromagnets at finite temperatures 1461–74
Raman scattering *see scattering, Raman*
Raman spectrum
induced by impurity in CsCl crystal 493–501
potassium bromide crystals 595–605
sodium chloride 2909–20
Random chain, nonmarkovian
localized states of a disordered system 1183–95
Random phase approximation
calculation of magnon energies of haematite 1226–36
Random phase model
Hall conductivity in a disordered system L247–9
Rank of a point group 732–7
Rare earth compounds
theory of magnetic properties 63–76
exchange interactions in chalcogenides 1360–74
Rare earth impurities
low symmetry centre in CaF_2 997–1007
Rare earth ion
anisotropic spin–orbit coupling in crystal fields 676–9
far infrared spectra 1237–52
spectroscopic properties of Er_2O_3 2921–40
vibrational spectra and structure 1123–33
UV irradiation of CaF_2 crystals containing RE^{3+}–H_i^- pairs L283–6
Rare gas
atom, van der Waals interaction 2553–61
crystal, elastic constants and zero point energy 2302–8
solid, stress tensor coefficient 3289–95

Rate equation
formulation for hopping conductivity 1817–29
Recombination luminescence
measurement of lifetimes in alkali halides 1537–52
Reflectivity
of molybdenum telluride 1101–8
of potassium bromide 2511–22
of sodium chloride 2511–22
Relativistic calculation
solution of Dirac equation for a Tamm model 798–806
Relaxation
proton dipole–dipole, due to tunnelling 2834–44
rate spectrum of phonon 5–14
Relaxation time
analysis of thermal conductivity by computer 2317–22
Relaxation
of Co^{2+} ions in $ZnWO_4$ 2961–75
Repulsive core
effect in a 1D H atom 1799–805
Resistivity, electrical
at antiferromagnetic transitions L31–4
Hall coefficient for solids and disordered systems L241–6
of GdAs L113–8
of liquid metals L175–7
of Mg–Sn 2991–7
of $NbSe_2$ L154–6
in s–d model L151–3
theory of anomalous Hall effect 1072–81
Resistivity, magnetothermal
of antiferromagnetic crystals at low temperatures 450–8, 459–73, 474–80
Resonance
Andrew's correction formula for amplifier responding to odd harmonics L169–70
electron spin spectra for Fe^{3+} in phlogopite 3566–72
in electronic spectrum of Pr^{3+} 615–30
magnetic field effect from Bernstein mode 3245–52
magnetophonon effect in p-type Te 3332–48
Resonance mode
in polyethylene due to kinks and folds L185–7
Resonance, nuclear magnetic
study of mixed M1/E2 HFS 2077–88
technique, molecular motion 990–6
used to identify quadrupole interaction on ^{192}Ir in Ni L303–6
Resonance
of Al_2O_3 3397–413
of Co^{2+} in $ZnWO_4$ 2949–60

Resonance, paramagnetic
of CdS:Fe:Ag 716–20
Resonance, pulsed nuclear double
technique for measuring spectra of dilute spins in solids L226–9
Resonant transfer of energy
excitation mechanisms in ZnSe 502–10
Rigid-ion model
of rutile structure crystal 1008–16
Rigid neutral atom density
selfconsistent calculation 2333–44
Rigid shell model
calculation of two phonon Raman spectrum of KBr 595–605
RKKY interaction
in metallic rare earth compounds 63–76
Rough surface currents
in superconductors 147–58
Rubidium halide
model for lattice dynamics 543–8
manganese fluoride antiferromagnet, Raman scattering 1461–74
Ruby
acoustic paramagnetic resonance in crystals doped with Fe and Si L136–8
two-step crossrelaxation 1876–82
Rutile structure crystals
conditions on elastic constant 1008–16
Rutile surface
hole trapping by ferric acceptor states 3147–52

S^2 ions
effect of charge transfer states on optical transitions 680–90
Saturation region
acoustoelectric phenomena in thin oscillator 582–94
Scattering
acoustic and optical phonon, in p-type PbTe 2746–56
Brillouin, in crystals showing Jahn-Teller phase transitions 3126–46
dynamical behaviour of electron transfer in InP and GaAs 3491–503
hydrodynamic expression for intermediate function 3279–88
investigation of small clusters of atoms 1109–22
lattice dynamics of strontium fluoride 2702–10
lattice dynamics of strontium titanate 2711–30
magnetic moment distribution in US 2427–44
multiple, by non-muffin-tin potentials L293–8
of atoms from surfaces, one-phonon contribution 3438–56
of atoms from surfaces, two-phonon terms 3459–61
of He from solid surface 2098–104
of long-wavelength neutrons by fluorite solutions 2677–88
Scattering, Raman
in antiferromagnets 1461–74
in caesium chloride 493–501
in caesium dihydrogen arsenate 3222–44
in ferroelectrics 3168–84, 3185–221, 3222–44
in helium L287–91
in indium phosphide L275–8
in manganese zinc fluoride 2011–26
in nickel oxide 1461–74
in potassium dihydrogen arsenate 3222–44
in potassium dihydrogen phosphate 3168–84, 3185–221, 3222–44
in rubidium manganese fluoride 1461–74
in sodium chloride 2909–20
in thulium compounds 1501–10
modification by magnetic order 2482–96
skew, influence of band structure 1072–81

Scheelite materials
elastic behaviour of $CaWO_4$ 3021–37

Schottky defect
energy calculated for NaCl ionic crystals L5–8

Schrödinger equation
band theory of quantum size effect L17–8
for wavefunction calculation L311–4
solution at band edge in a 1D crystal 2583–90
Schwarz–Hora effect
optical modulation of an electron beam by a laser 1976–84
theory L80–4
s–d exchange interaction
anomalous renormalization of conduction electron spectrum L151–3
Secondary emission
of solid compounds (Al,O) and (Al,Cu) subject to ionic bombardment 2192–9
Second harmonic generation
in molybdates L133–5
Selenium
atomic displacement by irradiation in ZnSe 1914–20
switching and memory effects 366–73
Self-avoiding walks
series expansions for Curie temperature of models in terms of statistics of contacts 1399–416

Selfconsistent singularities
of static correlation function in a ferromagnetic system at the critical point 1383–98
Self-diffusion
pressure dependence in plastic crystals L50–5
Self-dual relation
for Ising model with triplet interactions L253–5
for 3D assembly L181–3

Semiconductor
abrupt potential model in theory of surface states 3469–72
band structure of GaN 3462–8
Boltzmann's equation : solution using spherical harmonic expansion 55–62
condensation of excitons in Ge and Si 2369–91
diffusion of electrons in high electric field 1563–72
electronic structure of disordered systems L13–6
electroreflectance of GaSe single crystals L95–8
energy gap bowing in substitutional alloys 821–7
in zincblende alloy L27–30
high field transport in p-type PbTe 2746–56
impurity band hopping conduction 43–54
impurity core effect in n-type Si 3473–6
magnetic properties of rare earth compounds 63–76
many-body effects at metal–semiconductor junctions 2599–610
measurement by interband magneto-optical absorption 549–61
non-ohmic transport and phonon amplification 3349–70
non-parabolic transport problem 159–86
optical phonons and polaritons in $ZnSiP_2$ 1893–902
phonon-induced quadrupole potential 2357–68
positron lifetime spectra in Ge 779–86
possibility of amorphous ferromagnet L107–9
single valley, electron diffusion 1563–72
transverse magnetophonon effect 1657–74

Series expansion
for Ising and classical vector models 1399–416

Shell model
of LiF crystal 1158–64
of potassium bromide 595–605

Shubnikov–de Haas effect
study of Fermi surfaces in graphite–bromine 2163–78
Silicate
electron energy loss spectra 3153–60
Silicon
band edge determination 300–5
calculation of photoionization of Zn impurity 1985–90
surface states 1615–28
condensation of exciton 2369–91
electron irradiation damage in B-doped crystals 379–400
energy bands determined by MST L293–8
by valence charge density L299–302
impurity core effect on electron mobility 3473–6
nuclear Overhauser effect in spectrum of of $^{29}Si^{1}HCl_3$ L58–63
positron lifetime spectra 779–86
study of crack propagation by computer simulation L271–4
temperature dependence of vibronic spectra 1265–76
valence band structure 562–6
one-phonon scattering for He 3438–56
paramagnetic resonance in CdS crystals 716–20
Simulation, computer
of crack propagation L271–4
of electron channelling patterns 2117–28
Single valley semiconductor
diffusion of electrons in a high electric field 1563–72
Single matrix
representation of point group L279–81, 985–9

Skew-scattering
influence of band structure leading to anomalous Hall effect 1072–81

Skew transition
spin–lattice relaxation of Kramers' doublets 2629–50

Slow domain
in O_2 doped n type GaAs 187–98

Soda glass
effect of Tb^{3+} ions on optical properties 1716–26

Sodium
effective pair potentials 1277–83
halides, energy of formation of Schottky defect L5–8
lattice dynamics 293–9

Sodium bromate
estimation of second-harmonic generation coefficients 330–7

Sodium chlorate
estimation of second-harmonic generation coefficients 330–7
Sodium chloride
dielectric properties 1345–59, 2511–22
effect of melting on infrared spectra 2276–82
energy of formation of Schottky defect L5–8
phonon–phonon interaction and Raman scattering 2909–20
polarization impedance 134–46
thermoluminescence of Co activated crystals 2827–33
irradiated crystals 3552–65
Soft modes
in single ground state ferromagnets L157–61
Sound
absorption in $SrTiO_3$ 2419–20
coupling in rotating liquid HeII 721–31
Space charge wave
acoustoelectric phenomena in thin oscillator 582–94
Spatial extent of wavefunction
nature of electronic states in a disordered system 1196–206, 1183–95

Surface plasmon
excitation at metal–semiconductor junctions 2599–610
Surface plasmon dispersion
effect of short range correlations 1757–72
Surface potential
for lithium fluoride L143–5
Surface state
calculated for Si 1615–28
critique of abrupt potential model 3469–72
Surface structure
investigation using intensity/energy spectra L41–5
Susceptibility
of Ashkin–Teller model L250–1
Switching
high/low conductance in liquid selenium 366–73
of magnetization by infrared irradiation 2200–4
Symmetrized cube
of corepresentation of magnetic point group 977–84
Symmetry assignment
of one-phonon sideband in emission spectrum of CaO F^+ centre 709–15

Tamm model
solution of one-dimensional Dirac equation 798–806
Tamm–Dancoff approximation
calculation of speed dependent conductivity 914–27
Tellurium
magnetophonon resonance in p-type Te 3332–48
thermal expansion Grüneisen function 2129–37
threshold energy for displacement in ZnTe 2283–8
Temperature susceptibility
for Ising model on a simple cubic lattice 231–44
Tensor operator
for parametrization of matrix elements 3253–8
stress, linear dependence on second order material gradient 3289–95
Terbium
optical properties of Tb^{3+} doped soda glass 1716–26
Terbium vanadate
Jahn–Teller phase transition in crystals 3126–46
Thallium
bromide, thermal expansion 1589–603
chloride, thermal expansion 1589–603
Thermal acoustic flux
growth of acoustoelectric current in GaAs 199–211
Thermal conductivity
analysis of relaxation time by computer 2317–22
effect of electric and magnetic fields on glass 1153–7
Thermal expansion
negative, of axial solids 535–42
of Al_2O_3 at elevated temperatures 1046–58
of glass at low temperature 1943–4
tellurium 2129–37
of thallium bromide 1589–603
of thallium chloride 1589–603
of trigonal elements at low temperature 2731–45
Thermally modulated absorption
of Fe^{2+} ion in mica 1991–8
Thermal stimulated conductivity
in KBr and KI crystals 279–86
Thermodynamic data
of H/Nb system 1301–8
Thermodynamics
first order and critical point phase transitions 2392–404
properties of $GdCl_3$ with dipolar interactions 2205–16
two-step crossrelaxation in ruby 1876–82
Thermoluminescence
of potassium chloride 82–96
of sodium chloride crystals 2827–33, 3552–65
Thermomagnetic power
determined for bismuth 425–34
Thin AE oscillator
acoustelectric phenomena saturation study 582–94
Thin film
discontinuous measurement of current noise 2105–16
Three-body force
elastic constants 2302–8
Three-dimensional disordered system
degree of localization 1059–66
Three-dimensional eight-vertex model
on the diamond lattice 3429–37

Thulium
arsenate, Jahn-Teller transition 1501–10
distortion by, in alkaline earth fluorides 863–70
relaxation in CaF_2 and SrF_2 2629–50
Thulium vanadate
Jahn-Teller transition 1501–10, 2027–36
Tight-binding approximation for band structure calculation of electronic structure 2845–58
of boron nitride 3097–100
of graphite 3097–100
of magnesium fluoride 1945–52
of transition metal dichalcogenides 739–45
Tight-binding model
solution of quantum size effect 2591–8
solution of Schrödinger's model 2583–90
Time reversal symmetry
of long wavelength optical phonon 2468–81
Titanium
band structures of dichalcogenides 3038–46
T matrix
in cluster scattering 1109–22
Topologically disordered chain, localization L315–8
Trajectory deflection
of charged particle sputtering 1604–14
Transfer hamiltonian approach
to Kapitza resistance L166–8
Transferred electron effect
slow domain in n-type GaAs 187–98
Transition energy
phonon-induced shift 121–33
Transition metal dichalcogenides
band structure 3038–46
octahedral coordination 746–58
tight binding method 738–45
trigonal prism materials 759–78
transmission spectra
octahedral coordination 3531–9
trigonal prismatic coordination 3540–51
Transition rate
temperature dependence in Pt and Ir compounds L127–30
Transition temperature
for eight-vertex model 3429–37
pressure dependence in $NbSe_2$ L230–2
Transmission spectra
of transition metal dichalcogenides
octahedral coordination 3531–9
trigonal prismatic coordination 3540–51
Transport process
computer study 1921–9
Transport property
of bismuth 3061–72
of lead telluride 2746–56
Transverse magnetophonon effect
oscillatory structure 1657–74
Trapping
phosphorescence mechanisms in ZnS Cu 787–90
Trigonal contribution
to ionic distortion to fluoride lattice by Tm^{2+}–H^-(s) trigonal centre 863–70
Trigonal prismatic coordination
in transmission spectra of transition metal dichalcogenides 540–51
Trigonal prism material
band structure of transition metal dichalcogenides 759–78
Triplet interaction
self-dual relation of Ising model L253–5
Tungsten
band structure of transition metal dichalcogenides 759–78
Mössbauer line in Li_2WO_4 2523–33
Tunnel assisted hopping
in neutron irradiated GaAs L113–8
Tunnelling current
effect of paramagnetic impurities 1806–16
electron–phonon interaction 21–42
influence of properties of materials 2179–91
proton dipole–dipole relaxation in methyl groups 2834–44
Tunelling junction
electron–phonon interaction 21–42
Tunnelling methyl group
proton relaxation and hyperfine structure 631–40
Tunnelling rotation
effect on sideband of methyl group hyperfine structure 1739–44
in irradiated methyl malonic acid crystals 518–28
Two-dimensional model
for atomic vibration in disordered system 1017–27
Two-dimensional solid
long-range order and metastability L124–6
Two-magnon Raman scattering
in antiferromagnets 1461–74
Two-phonon term
scattering of atoms from surfaces 3438–56
Two-phonon absorption
polarization dependence of coefficient 2651–64
Two-roton bound state
in liquid He L289–91

Ultrasonics
effects of magnetic field in $SrTiO_3$ 2419–26
elastic behaviour of $CaWO_4$ 3021–37
Ultraviolet absorption
of heavy metal ion in alkali halides 691–701
Ultraviolet excitation
fluorescence lifetimes of type I diamonds L1–4
Ultraviolet radiation
effect of CaF_2-containing trivalent rare earth L283–6
TSC in KBr and KI crystals 279–86
Ultraviolet spectrum
of thin film $C_{28}^{3}H_{58}$ and $C_{42}H_{86}$ 871–8
Umkehr effect
thermomagnetic power of bismuth 425–34
Uniaxial stress
effect on zero-phonon line of F_3 centres 266–74
Jahn–Teller coupling in F^+ centre in CaO 2225–45
study of colour centre in CaO 2543–52
Uranium
magnetic ordering and ordered moments in monochalcogenides 3012–20
Uranium monosulphide
magnetic moment distribution 2427–44

Vacancy pair
interaction at elevated temperature in CsCl lattice 401–7
Vacuum polarization
force between two excitons in a metal–insulator transition L119–23
Vacuum techniques
measurement of equilibrium pressure of H_2 in Nb 1293–300, 1301–8
Vacuum ultraviolet
optical properties of mica 879–87
Valence band structure
of magnesium fluoride by tight-binding method 1945–52
of silver fluoride 562–6
Vanadium oxide
phonon softening and metal–insulator transition 1317–34
Van der Waals constant
for rare gas atoms in a dense liquid 2553–61
Van Hove singularity
electronic density of states for disordered system 3322–31
Van Vleck paramagnet
excitation spectrum L194–6
Vector model
term structure of series expansions 1399–416
weighting of graph 1417–28
Velocity autocorrelation function
in argon 353–65
Vibration amplitude
from elastic constants in compound crystals 1309–16
Vibration, atomic
in orientationally disordered systems
hexagonal ice 1028–37
two-dimensional model 1017–27
Vibrational mode
effect on Kapitza resistance 1216–21
Vibration
crystalline polyethylene 2309–16
cubic crystal, dynamic Jahn–Teller effect 853–62
technique for determining relationships in dynamic matrix 1773–98
temperature dependence of spectra in irradiated Si 1265–76
Vibrational properties
of $Co(CN)_6^{3-}$ doped alkali halides 1511–8
Vibrational spectra
of disordered chain L315–8
of lanthanum oxide 1123–33
of neodymium oxide 1123–33
of potassium bromide L307–9
of thallium bromide 1589–603
of thallium 1589–603
Vierergruppe, double
investigation 2037–44
Vivianite
thermally modulated absorption 1991–8
Vorticity
in liquid HeII 2998–3011

Water
anomalous parapositronium lifetime 3273–8
statistical mechanics 889–905
Wavefunction
of copper 2323–32
of disordered system 1183–95, 1196–206
of helium L311–4
of iron 2323–32
Wilson FG matrix
method used to analyse vibrational spectra of La_2O_3 and Md_2O_3 1123–33

Xenon
diffusion in CsI L256–60
X-ray
determination of electro-optic properties of *meta*-nitroaniline L233–6

diffraction study of Cu–Ge alloy 2977–84
diffraction study of Cu–In alloy 2985–90
diffraction study of Hg to 150°C 2089–97
electric polaron in absorption in Li halides 3259–63
$K\beta_2$ emission band for Ge and semiconducting compounds GaAs, ZnSe and CuBr 2259–66
scattering from a dense fluid 2553–61
X-ray spectra
chemical shift in K absorption discontinuity in As 793–7
thermoluminescence of NaCl crystals 3552–65

Ytterbium
spectrum in CdS 2669–76
Yttrium iron garnet
linear dichroism in Si doped crystal 481–92
magnetization switching 2200–4

Zeeman spectra
of $Er:GdAlO_3$ 1705–15
Zero field susceptibility
of generalized Ising model 435–49, 3387–96

Zero phonon line
F_2 centres in CaF_2 and SrF_2 257–65, 266–74, 275–8, 1475–88, 1489–500
in vibronic spectra of irradiated Si 1265–76
Zero point energy
contribution of high order multiple three-body forces 2302–8
effect on magnetocrystalline anisotropy of Dy L85–8
Zincblende alloy
atomic displacement effect on energy gap bowing L27–30
calculation of photoionization in Si 1985–90
Zinc selenide
atom displacement of Sc by irradiation 1914–20
$K\beta_2$ emission band 2259–66
site sensitive excitation 502–10
Zinc silicon phosphide
optical phonon and polariton 1893–902
Zinc sulphide
phosphorescence mechanism 787–90
Zinc telluride
threshold energy for displacement of Te 2283–8
Zinc tungstate
properties of Co^{2+} ion 2949–60, 2961–75
Zirconium
band structures of transition metal dichalcogenides 746–58
